Presents a wide range of perspectives on a new area of research in high ability: the non-cognitive facets contributing to exceptional achievement such as giftedness, talent, creativity, excellence, genius, child prodigies, exceptional leadership, and wisdom. International Handbook on Giftedness Larisa Shavinina, 2009-08-12. If you publish, you are trying to create something that is original that stands out from the crowd. Above all, you want to create something you are proud of. Richard Branson 2002 p 57. After the publication of my bestselling *International Handbook on Innovation*, publishers from around the world began to invite me to work on new books with them. When Springer invited me to prepare the *International Handbook on Giftedness*, I was on a maternity leave with my 3 months old and my 5 year old was just starting school. I however had wanted to prepare such a Handbook for a long time and was waiting for just the right moment to dive right into such an endeavor. The time had come and I agreed to prepare a Handbook that would expose readers to new views, great discoveries, and significant advancements of scientific knowledge exactly as Richard Feynman advised: see his opening quote at the beginning of the introductory chapter. I have always been convinced of the paramount significance of the topic of giftedness and gifted education to the world as a whole. There is no doubt that gifted individuals are and will be extremely important to society. One way to understand the history of human civilization is via inventions and discoveries of the gifted. All human cultural development builds on the amazing technological, scientific, educational, and moral achievements of the human mind. Today, people increasingly realize that gifted and talented individuals are even more important than in the past. *The Natural Musician* Dina Kirnarskaya, 2009-06-11. One of the great mysteries of music is how it affects us in multitude of ways. Whether talking about our individual tastes as listeners or individual differences as performers, what are the psychological qualities that can turn some people into great musicians but not others? Is it down to genes, sheer hard work, or some other quality in the individual? *The Natural Musician* is the story of how we become composers, performers, or just discriminating listeners. It searches for those psychological traits essential for turning one into a musician. Unlike many others, Kirnarskaya does not believe in the existence of talent but argues that it is due to multiplicative factors which she describes, analyses, and shows how to test. She also sheds light on the essence and origins of perfect pitch, examines the triumphs and tortures of musical prodigies, and considers the implications of her theories for the teaching of music. After a foreword from the legendary conductor Gennady Rodhestvensky, the book looks at our basic musical faculties: how we perceive sounds, distinguish their pitch and structure, and recognise rhythm. It then examines the nature of musical empathy: what it is that allows us to perceive and emotionally connect with music. The second part of the book focuses on the creative processes behind writing music. The third section deals with music education, looking at the role of innate and inherited characteristics in the formation of talent and considering why many who excel at an early age burn out later on. The book ends exploring how

musical development can shape the human brain strengthening other cognitive faculties including those unrelated to music This is a book that will fascinate anyone with an interest in music and musicians from the fields of music psychology and education to musicians themselves whether amateur and professional Wired for Culture: Origins of the Human Social Mind Mark Pagel, 2012-02-27 Does an excellent job of using evolutionary biology to discuss the origins of religion music art and morality Publishers Weekly starred review A unique trait of the human species is that our personalities lifestyles and worldviews are shaped by an accident of birth namely the culture into which we are born It is our cultures and not our genes that determine which foods we eat which languages we speak which people we love and marry and which people we kill in war But how did our species develop a mind that is hardwired for culture and why Evolutionary biologist Mark Pagel tracks this intriguing question through the last 80 000 years of human evolution revealing how an innate propensity to contribute and conform to the culture of our birth not only enabled human survival and progress in the past but also continues to influence our behavior today Shedding light on our species defining attributes from art morality and altruism to self interest deception and prejudice *Wired for Culture* offers surprising new insights into what it means to be human *Creativity, Psychology and the History of Science* H.E. Gruber, Katja Bödeker, 2005-09-22 *Creativity Psychology and the History of Science* offers for the first time a comprehensive overview of the oeuvre of Howard E Gruber who is noted for his contributions both to the psychology of creativity and to the history of science The present book includes papers from a wide range of topics In the contributions to creativity research Gruber proposes his key ideas for studying creative work Gruber focuses on how the thinking motivation and affect of extraordinarily creative individuals evolve and how they interact over long periods of time Gruber s approach bridges many disciplines and subdisciplines in psychology and beyond several of which are represented in the present volume cognitive psychology developmental psychology history of science aesthetics and politics The volume thus presents a unique and comprehensive contribution to our understanding of the creative process Many of Gruber s papers have not previously been easily accessible they are presented here in thoroughly revised form
