Delphine Red Shirt, 2016-11-01 Published through the Recovering Languages and Literacies of the Americas initiative supported by the Andrew W Mellon Foundation The general focus in Lakota oral literary research has been on content rather than process within oral traditions In this groundbreaking study of the characteristics of Lakota oral style Delphine Red Shirt shows how its composition and structure are reflected in the work of George Sword who composed 245 pages of text in the Lakota language using the English alphabet What emerges in Sword's Lakota narratives are the formulaic patterns inherent in the Lakota language that are used to tell the narratives as well as recurring themes and story patterns Red Shirt's primary conclusion is that this cadence originates from a distinctly Lakota oral tradition Red Shirt analyzes historical documents and original texts in Lakota to answer the question How is Lakota literature defined Her pioneering work uncovers the epistemological basis of this literature which can provide material for literary studies anthropological and traditional linguistics and translation studies Her analysis of Sword's texts discloses tools that can be used to determine whether the origin of any given narrative in Lakota tradition is oral thereby opening avenues for further research *Socrates Digital™*

*for Learning and Problem Solving* Salisbury, Mark, 2021-11-12 There is a tremendous need for computer scientists data scientists and software developers to learn how to develop Socratic problem solving applications While the amount of data and information processing has been accelerating our ability to learn and problem solve with that data has fallen behind Meanwhile problems have become too complex to solve in the workplace without a concerted effort to follow a problem solving process This problem solving process must be able to deal with big and disparate data Furthermore it must solve problems that do not have a rule to apply in solving them Moreover it must deal with ambiguity and help humans use informed judgment to build on previous steps and create new understanding Computer based Socratic problem solving systems answer this need for a problem solving process using big and disparate data Furthermore computer scientists data scientists and software developers need the knowledge to develop these systems Socrates Digital for Learning and Problem

Solving presents the rationale for developing a Socratic problem solving application. It describes how a computer based Socratic problem solving system called Socrates Digital can keep problem solvers on track, document the outcome of a problem solving session and share those results with problem solvers and larger audiences. In addition, Socrates Digital assists problem solvers in combining evidence about their quality of reasoning for individual problem solving steps and their overall confidence in the solution. Socrates Digital also captures, manages and distributes this knowledge across organizations to improve problem solving. This book also presents how to build a Socrates Digital system by detailing the four phases of design and development: understand, explore, materialize and realize. The details include flow charts and pseudo code for readers to implement Socrates Digital in a general purpose programming language. The completion of the design and development process results in a Socrates Digital system that leverages artificial intelligence services from providers that include Apple, Microsoft, Google, IBM and Amazon.
