wood and wood can catch fire This volume examines the twists and turns of the fascinating history of a difficult philosophical concept focusing on the metaphysical sense of powers that is the powers that are invoked in the explanation of natural changes and activities Scholars probe the views of thinkers from antiquity to the present day Anaxagoras Plato the Stoics Abelard Anselm Henry of Ghent Gottfried Wilhelm Leibniz Margaret Cavendish Mary Shepherd Immanuel Kant Georg Wilhelm Friedrich Hegel and numerous others In addition the volume contains four short reflection essays that examine the concept of powers from the perspective of disciplines other than philosophy namely history of music West African religions history of chemistry and history of art The history of philosophy brims with controversies surrounding the concept of power and these controversies have not diminished particularly as potentialities or powers see a revival in contemporary analytic metaphysics Hence telling the history of philosophical theories of powers means exploring the trajectory of a concept whose importance to the past and present of philosophy can hardly be overstated *The Incentivised University* Seán Mfundza Muller, 2022-01-24 The core thesis of this book is that to understand the implications of incentive structures in modern higher education we require a deeper understanding of associated issues in the philosophy of science Significant public and philanthropic resources are directed towards various forms of research in the hope of addressing key societal problems That view and the associated allocation of resources relies on the assumption that academic research will tend towards finding truth or at least selecting the best approximations of it The present book builds on and extends contributions in philosophy and higher education to argue that this assumption is misplaced with serious implications for modern higher education and its role in informing societal decisions and government policy The book develops a philosophical foundation for the analysis of the connection between higher education incentives scientific progress and societal outcomes That in turn is used to demonstrate how the current approach to incentivising intellectual and scientific progress is likely not only to fail but in fact to cause harm on the very dimensions it purports to improve The arguments presented are illustrated with examples from medicine and academic economics making the book one of the first to examine issues of scientific progress and social consequences across the human and social sciences In doing so it develops a novel critique of modern economics that in turn provides a more philosophically substantive foundation for popular critiques of economics than has existed to date
