Abstract

Successful project management is directly linked to the ability of project managers and other key players to understand the importance of organizational politics and how to make them work for project success. While most of us view politics with distaste, there is no denying that effective managers are often those who are willing and able to employ appropriate political tactics to further their project goals. This paper offers some thoughts on the role of politics in successful project management, identifying ways in which project managers can use politics in a positive and effective manner. © 2000 Elsevier Science Ltd and IPMA. 1. Introduction

One of the most powerful but frequently overlooked influencers of successful project management concerns the roles played by knowledgeable personnel in using power and political behavior to promote successful implementation. Most of us tend to regard political activity with a sort of repugnance, finding the conduct of politics to be both personally distasteful and organizationally damaging. There is an interesting paradox at work here, however. Common experience will demonstrate to both practitioners and neutral observers that for all our often-expressed personal disdain for the exercise of politics, we readily acknowledge that this process is often one of the prime moving forces within any organization, for better or worse.

Political behavior, sometimes defined as any process by which individuals and groups seek, acquire, and maintain power, is pervasive in modern corporations. Examples can include activities as significant as nego-

tiating for a multi-million dollar commitment of money for a new project to as mundane as determining who will attain a corner office; as predatory as the willful attempt to derail another's career to those as benign as deciding where the yearly office party will be held. The key underlying feature of each of these and countless other examples is that the processes by which we make decisions and seek power, the issues we deem 'power-laden', and steps we go to to maintain our position are often an emotionally-charged sequence having important personal and corporate ramifications.

The field of project management is one that is particularly fraught with political processes for several unique reasons. First, because project managers in many companies do not have a stable base of power (either high status or over-riding authority), they must learn to cultivate other methods of influence in order to secure the resources from other departments necessary to attain project success. Second, and closely related to the first reason, these projects often exist outside of the traditional line (functional) structure, relegating project managers to the role of supernumerary. Almost all resources (financial, human, informational, etc.) must be negotiated and bargained. Finally,

Project Management in Construction Anthony Walker, 2015-01-30. As with all previous editions of Project Management in Construction, this sixth edition focuses on systems theory as the approach suitable for organizing and managing people skilled in the design and completion of construction projects. It discusses the many competing paradigms and alternative perspectives available, for example, in relation to differentiation and integration as well as the emerging study of temporary organizations and its relevance to construction project management. Whilst encompassing the need to develop further theoretical aspects of construction project organization theory, this edition has also enhanced the application of organization studies to practical issues of construction project management. More emphasis has been placed on the added complexity of construction project management by issues surrounding clients and stakeholders and the control and empowerment of project participants. Additional focus has been placed on sustainability issues as they impinge on construction project management, on reworked views on supply chain management, and on developments in partnering together, with clarification of the shifting terms and definitions relating to construction organization structures.
