

in a scientific sense, but provides a degree of amelioration sufficient to allow a majority of subjects to function marginally, if not well, in the community rather than having to be confined to mental institutions as in the past. With the pharmacological alleviation of the most distressed phases of the psychotic process, psychiatrists are able to give more time and consideration to the psychological factors involved in the illness. For those interested in understanding such factors, the book provides a comprehensive basis for psychological understanding, and appropriate rational treatment.

For the reader with extensive experience in psychiatry and well versed in psychoanalytic concepts and terminology, the book is easy reading, and follows a logically presented narrative in terms of nosology, history, and early psychoanalytic theories preceding the explication of the psychotic process, which forms the central part of the book. Part five of the book entitled "Special Considerations" serves both to integrate the preceding four parts, and to provide a summary of the main contributions to the subject together with the author's viewpoints on the importance of the different aspects. The reader, who is a novice to the field, would be greatly helped by reading this section as a prologue and then reading it again in its natural sequence in the context of the book. It will then be easier for the inexperienced clinician to grasp the concepts and evaluate their relevance in psychosis. It would also help such a reader to appreciate the therapeutic considerations discussed in part six, and to evaluate the epilogue.

It is important to realize that the author keeps strictly to psychoanalytic concepts as they refer to the psychotic process. The basic anxiety as the author sees it is the fear of dissolution and disintegration of the self. He outlines the defenses used and the state of the ego and its deficits. He also discusses the basic qualitative differences between neurosis and psychosis, and discusses psychoanalytic arguments in favour of both differences and similarities. He points out that in D.S.M. III, there is a failure to define the psychotic process. Frosch also points out that in the literature there are a number of terms, which are ill defined and that one term may be applied variously to describe a developmental stage and process on the one hand, and pathological behaviour and a regressive state on the other. On page 23, the author lists seven principal frames of reference under which psychoanalytic contributions to psycho-pathology can be divided. The core of the book on the psychotic process examines each of these frames of reference, and the main concepts attributable to these areas. This is helpful to the reader in providing a frame work around which to organize both ideas and current knowledge. For example; Frosch discusses the denial of unconscious homosexuality. This is seen as providing a frame of reference for four types of delusions, persecutory, erotomanic, jealous, and grandiose. He poses the question as to which specific ego disturbances set the stage for a psychotic reaction to the unconscious

homosexual conflict, and he asks what role aggression and hostility play in the process, and then elaborates on a number of ideas and concepts about this.

Frosch considers that traumatic and humiliating experiences may occur on the one hand at a time when ego identity has not completely evolved, and that on the other hand the experiences may dovetail with existing fantasies, and lend to them actuality. Such experiences whether directly sexual or not may make passivity humiliating, degrading, painful, and possibly catastrophic. The explication of the complexity of human psychological development and experience makes Frosch's discussions and arguments particularly valuable. At the same time, he expresses these very clearly. Throughout the book, he emphasizes that defects in ego functioning are a key element in the psychotic process. The relationship with reality, the feeling of reality, and the capacity to test reality are seen as interwoven developmentally and operationally. In the chapter on the relationship with reality, criteria differentiating psychoses from borderline personality are delineated. There is a very clear exposition of the differences. In confirming the importance of self-cohesion and object constancy in psychological development, Frosch adds a third dimension, that of reality constancy, and his discussion of this adds an important perspective to the understanding of the psychotic process. The discussion about reality constancy has pragmatic value for the understanding of psychotic behaviour, and the planning for its management, and treatment.

In summary, this book gives a most comprehensive account of the psychoanalytic contributions to the understanding of psychotic processes. For those readers, who like to settle for one volume to give an essential overview of a field, this one fulfills that role admirably.

**Power to Change: Family Case Studies in the Treatment of Alcoholism.** Edited by Edward Kaufman M.D. New York: Gardner Press, 316 pp., \$23.50 (U.S.) 1984.

Family therapy has become an integral component of the interventional repertoire currently being offered to alcoholic clients. Among family therapists in the alcohol treatment field, there is the widespread belief that drinking behaviour is a symptom or consequence of underlying distress or tension in the marital/family system. Therefore, drinking may serve as an adaptive or functional mechanism for relieving underlying stressor reducing disequilibrium in the marital and family interactional system. Within this systems perspective, there is the notion that family/marital problems or tensions must be resolved or to use the systems terminology, imbalances in the family structure must be
