The Electric Vehicle Gijs Mom, 2013-02-15 Winner of the Engineer Historian Award from the International History and Heritage Committee of the American Society of Mechanical Engineers and the Nicholas Joseph Cugnot Award given by the Society of Automotive Historians Recent attention to hybrid cars that run on both gasoline and electric batteries has made the electric car an apparent alternative to the internal combustion engine and its attendant environmental costs and geopolitical implications Few people realize that the electric car neither a recent invention nor a historical curiosity has a story as old as that of the gasoline powered automobile and that at one time many in the nascent automobile industry believed battery powered engines would become the dominant technology In both Europe and America electric cars and trucks succeeded in meeting the needs of a wide range of consumers Before World War II as many as 30 000 electric cars and more than 10 000 electric trucks plied American roads European cities were busy with electrically propelled fire engines taxis delivery vans buses heavy trucks and private cars Even so throughout the century long history of electric propulsion the widespread conviction it was an inferior technology remained stubbornly in place an assumption mirrored in popular and scholarly memory In *The Electric Vehicle* Gijs Mom challenges this view arguing that at the beginning of the automobile age neither the internal combustion engine nor the battery powered vehicle enjoyed a clear advantage He explores the technology and marketing consumer ratio faction relationship over four generations of electric vehicle design with separate chapters on privately owned passenger cars and commercial vehicles Mom makes comparisons among European countries and between Europe and America He finds that the electric vehicle offered many advantages among them greater reliability and control less noise and pollution He also argues that a nexus of factors cultural underpowered and less rugged electric cars seemed feminine at a time when most car buyers were men structural the shortcomings of battery technology at the time and systemic the infrastructural problems of changing large numbers of batteries ultimately gave an edge to the internal combustion engine One hopes as a new generation of electric vehicles becomes a reality *The Electric Vehicle* offers a long overdue reassessment of the place of this technology in the history of street transportation

History of the Electric Automobile Ernest Henry Wakefield, 1993-08-01 *History of the Electric Automobile* covers the evolution from the first electric vehicles of the 1880s to the advances of today Beginning with early electric vehicle development in England France and the United States this book provides an in depth look at the so called golden age of electric vehicles 1895 1905 demonstrating the technological improvements and business risks of this era This history also explores the dead period of the 1930s 1940s and 1950s and the subsequent re birth of interest in electric vehicles in the early 1960s Events which have impacted the development of electric cars since then most notably the Electric Vehicle Act of 1976 are also examined The book also features an appendix section containing such information as a name table of American electric cars the Electric Vehicle Act of 1976 nostalgia and more A glossary and index are also included For more than a century nearly all seers who

have predicted the role of electric vehicles in personal transportation have been wrong This book records what actually happened both within America and internationally Ernest H Wakefield History of Electric Cars Nigel Burton,2013-06-30 One hundred years ago electric cars were the most popular automobiles in the world In the late nineteenth century and at the start of the twentieth century they outsold every other type of car And yet within a couple of decades of the start of the twentieth century the electric car had vanished Thousands of battery powered cars disappeared from the streets replaced by the internal combustion engine and their place in the history of the automobile was quietly erased A century later electric cars are making a comeback Fears over pollution and global warming have forced manufacturers to reconsider the electric concept A History of Electric Cars presents for the first time the full story of electric cars and their hybrid cousins It examines how and why electric cars failed the first time and why today s car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again The book examines in detail Early vehicles such as the Lohner Porsche petrol electric hybrid of 1901 Key figures in the history of the electric car development such as Henry Ford Sir Clive Sinclair s plans to build a number of electric vehicles designed to sit alongside the Sinclair C5 The return of the electric technology to vehicles as diverse as the NASA Lunar Rover commuting vehicles and supercars Future developments in electric cars For the first time the full story of electric cars and their hybrids are examined The hidden past of the electric automobile is uncovered and its future developments are discussed Superbly illustrated with 300 colour photographs many of which are rare and original sketch designs Nigel Burton has written and lectured on cars and automotive history for more than twenty years *Power Systems for Electric Vehicles* ,1967 **Electric Vehicles and Other Alternatives to the Internal Combustion Engine** United States.
