## **Powering Apollo James E Webb Of Nasa:**

Powering Apollo W. Henry Lambright, 1995 When President Kennedy issued his well known challenge to reach the moon and return safely before the end of the 1960s the immediate responsibility for undertaking the task fell to 54 year old NASA director James E Webb Eight years later when the Apollo 11 spacecraft splashed down safely in the Pacific and the screens in NASA's Mission Control at Houston flashed the words Task Accomplished it was Webb who deserved much of the credit In Powering Apollo W Henry Lambright explores Webb's leadership role in NASA's spectacular success success that is rare in ambitious government policies and programs A North Carolina native and Congressional staff member Jim Webb had served in Congress worked in the Truman administration and risen to high office in the defense and energy industries by 1961 when Kennedy named him to head the new National Aeronautics and Space Administration Examining Webb's role as both Washington insider and government program director Lambright probes the skills and experience that equipped him to handle his enormous responsibilities He also shows how Webb's performance reflected important changes in twentieth century public life including the concentration of political power in Washington expansion of the federal bureaucracy the rise of big science and visions of cooperation among government industry and higher education Apollo's Legacy Roger D. Launius, 2019-05-14 An all encompassing look at the history and enduring impact of the Apollo space program In Apollo's Legacy space historian Roger D Launius explores the many faceted stories told about the meaning of the Apollo program and how it forever altered American society The Apollo missions marked the first time human beings left Earth's orbit and visited another world and thus they loom large in our collective memory Many have detailed the exciting events of the Apollo program but Launius offers unique insight into its legacy as seen through multiple perspectives He surveys a wide range of viewpoints and narratives both positive and negative surrounding the program These include the argument that Apollo epitomizes American technological and political progress technological and scientific advances garnered from the program critiques from both sides of the political spectrum about the program's expenses and even conspiracy theories and denials of the program's very existence Throughout the book Launius weaves in stories from important moments in Apollo's history to draw readers into his analysis Apollo's Legacy is a must read for space buffs interested in new angles on a beloved cultural moment and those seeking a historic perspective on the Apollo program The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley, 2013-03-15 In this definitive study J D Hunley traces the program's development from Goddard's early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach

enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight

**Return to the Moon** Harrison Schmitt,2007-12-28 Former NASA Astronaut Harrison Schmitt advocates a private investor based approach to returning humans to the Moon to extract Helium 3 for energy production to use the Moon as a platform for science and manufacturing and to establish permanent human colonies there in a kind of stepping stone community on the way to deeper space With governments playing a supporting role just as they have in the development of modern commercial aeronautics and agricultural production Schmitt believes that a fundamentally private enterprise is the only type of organization capable of sustaining such an effort and eventually even making it pay off

**Defining NASA** W. D. Kay,2012-02-01 Most observers would point to the 1969 Apollo moon landing as the single greatest accomplishment of NASA yet prominent scientists engineers and public officials were questioning the purpose of the U S space program even at the height of its national popularity Defining NASA looks at the turbulent history of the space agency and the political controversies behind its funding W D Kay examines the agency s activities and behavior by taking into account not only the political climate but also the changes in how public officials conceptualize space policy He explores what policymakers envisioned when they created the agency in 1958 why support for the Apollo program was so strong in the 1960s only to fade away in such a relatively short period of time what caused NASA and the space program to languish throughout most of the 1970s only to reemerge in the 1980s and finally what role the agency plays today

**NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives** Steven J. Dick,National Aeronautics and Space Administration,2010-07-07 On 29 July 1958 President Dwight D Eisenhower signed the National Aeronautics and Space Act creating the National Aeronautics and Space Administration NASA which became operational on 1 October of that year Over the next 50 years NASA achieved a set of spectacular feats ranging from advancing the well established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight In the midst of the geopolitical context of the Cold War 12 Americans walked on the Moon arriving in peace for all mankind Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble as well as the pale blue dot from the edge of the solar system A flotilla of spacecraft has studied Earth while other spacecraft have probed the depths of the solar system and the universe beyond In the 1980s the evolution of aeronautics gave us the first winged human spacecraft the Space Shuttle and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars With the Apollo fire and two Space Shuttle accidents NASA has also seen the depths of tragedy In this volume a wide array of scholars turn a critical eye toward NASA s first 50 years probing an institution widely seen as the premier agency for exploration in the world carrying on a long tradition of exploration by the United States and the human

species in general Fifty years after its founding NASA finds itself at a crossroads that historical perspectives can only help to illuminate

Why Mars W. Henry Lambright, 2014-06-10 Traces NASA's torturous journey to Mars from the fly bys of the 1960s to landing rovers and seeking life today Mars has captured the human imagination for decades Since NASA's establishment in 1958 the space agency has looked to Mars as a compelling prize the one place beyond the Moon where robotic and human exploration could converge Remarkably successful with its roaming multi billion dollar robot Curiosity NASA's Mars program represents one of the agency's greatest achievements Why Mars analyzes the history of the robotic Mars exploration program from its origins to today W Henry Lambright examines the politics and policies behind NASA's multi decade quest illuminating the roles of key individuals and institutions along with their triumphs and defeats Lambright outlines the ebbs and flows of policy evolution focusing on critical points of change and factors that spurred strategic reorientation He explains Mars exploration as a striking example of big science and describes the ways a powerful advocacy coalition composed of NASA decision makers the Jet Propulsion Laboratory the Mars academic science community and many others has influenced governmental decisions on Mars exploration making it at times a national priority The quest for Mars stretches over many years and involves billions of dollars What does it take to mount and give coherence to a multi mission big science program How do advocates and decision makers maintain goals and adapt their programs in the face of opposition and budgetary stringency Where do they succeed in their strategies Where do they fall short Lambright's insightful book suggests that from Mars exploration we can learn lessons that apply to other large scale national endeavors in science and technology

Wolfe, 2013-01-01 A synthetic account of how science became a central weapon in the ideological Cold War Honorable Mention for the Forum for the History of Science in America Book Prize of the Forum for the History of Science in America For most of the second half of the twentieth century the United States and its allies competed with a hostile Soviet Union in almost every way imaginable except open military engagement The Cold War placed two opposite conceptions of the good society before the uncommitted world and history itself and science figured prominently in the picture *Competing with the Soviets* offers a short accessible introduction to the special role that science and technology played in maintaining state power during the Cold War from the atomic bomb to the Human Genome Project The high tech machinery of nuclear physics and the space race are at the center of this story but Audra J Wolfe also examines the surrogate battlefield of scientific achievement in such diverse fields as urban planning biology and economics explains how defense driven federal investments created vast laboratories and research programs and shows how unfamiliar worries about national security and corrosive questions of loyalty crept into the supposedly objective scholarly enterprise Based on the assumption that scientists are participants in the culture in which they live *Competing with the Soviets* looks beyond the debate about whether military influence distorted science in the Cold War Scientists choices and opportunities have always been shaped by the ideological assumptions political mandates and social mores of their times The idea that American science ever operated in a free zone outside of politics is Wolfe argues itself a legacy of the ideological Cold War that held up American science and scientists as beacons of freedom in contrast to their peers in the Soviet Union Arranged chronologically and thematically the book highlights how ideas about the appropriate relationships among science scientists and the state changed over time      *Innovation in Flight* Joseph R. Chambers, 2005      *From Insight to Innovation* David P. Billington, Jr., 2020-11-17 The engineering ideas behind key twentieth century technical innovations from great dams and highways to the jet engine the transistor the microchip and the computer Technology is essential to modern life yet few of us are technology literate enough to know much about the engineering that underpins it In this book David P Billington Jr offers accessible accounts of the key twentieth century engineering innovations that brought us into the twenty first century Billington examines a series of engineering advances from Hoover Dam and jet engines to the transistor the microchip the computer and the internet and explains how they came about and how they work      *Mercury Rising: John Glenn, John Kennedy, and the New Battleground of the Cold War* Jeff Shesol, 2021-06-01 A riveting history of the epic orbital flight that put America back into the space race If the United States couldn't catch up to the Soviets in space how could it compete with them on Earth That was the question facing John F Kennedy at the height of the Cold War a perilous time when the Soviet Union built the wall in Berlin tested nuclear bombs more destructive than any in history and beat the United States to every major milestone in space The race to the heavens seemed a race for survival and America was losing On February 20 1962

when John Glenn blasted into orbit aboard Friendship 7 his mission was not only to circle the planet it was to calm the fears of the free world and renew America's sense of self belief Mercury Rising re-creates the tension and excitement of a flight that shifted the momentum of the space race and put the United States on the path to the moon Drawing on new archival sources personal interviews and previously unpublished notes by Glenn himself Mercury Rising reveals how the astronaut's heroics lifted the nation's hopes in what Kennedy called the hour of maximum danger
