```

This output displays packet exchanges between router R1 and router R2 during the initial PPP negotiation.

- The figure shows the output of the **debug ppp negotiation** command in a normal negotiation, where both sides agree on network control program (NCP) parameters. In this case, protocol type IP is proposed and acknowledged.
  - The first two lines indicate that the router is trying to bring up the LCP and will use the indicated negotiation options (Quality Protocol and Magic Number). The value fields are the values of the options themselves. C025/3E8 translates to Quality Protocol LQM. 3E8 is the reporting period (in hundredths of a second). 3D56CAC is the value of the Magic Number for the router.
  - ppp: sending CONFREQ, type = 4 (CI\_QUALITYTYPE), value = C025/3E8
  - ppp: sending CONFREQ, type = 5 (CI\_MAGICNUMBER), value = 3D56CAC
  - The next two lines indicate that the other side negotiated for options 4 and 5 and that it requested and acknowledged both. If the responding end does not support the options, the responding node sends a CONFREJ. If the responding end does not accept the value of the option, it sends a CONFNAK with the value field modified.
  - ppp: received config for type = 4 (QUALITYTYPE) acked
  - ppp: received config for type = 5 (MAGICNUMBER) value = 3D567F8 acked (ok)
