

Electroplating

- Electroplating is the process of depositing one metal onto another metal.
- Electrons travel from the negative end of the battery through the cathode (penny), through the solution, up through the anode (zinc), and into the positive end of the battery.
- The positively charged zinc ions from the solution are attracted to the negatively charged cathode.
- These ions attach themselves to the cathode.
- More positively charged zinc ions are pulled off the anode to replace the ones now on the cathode.

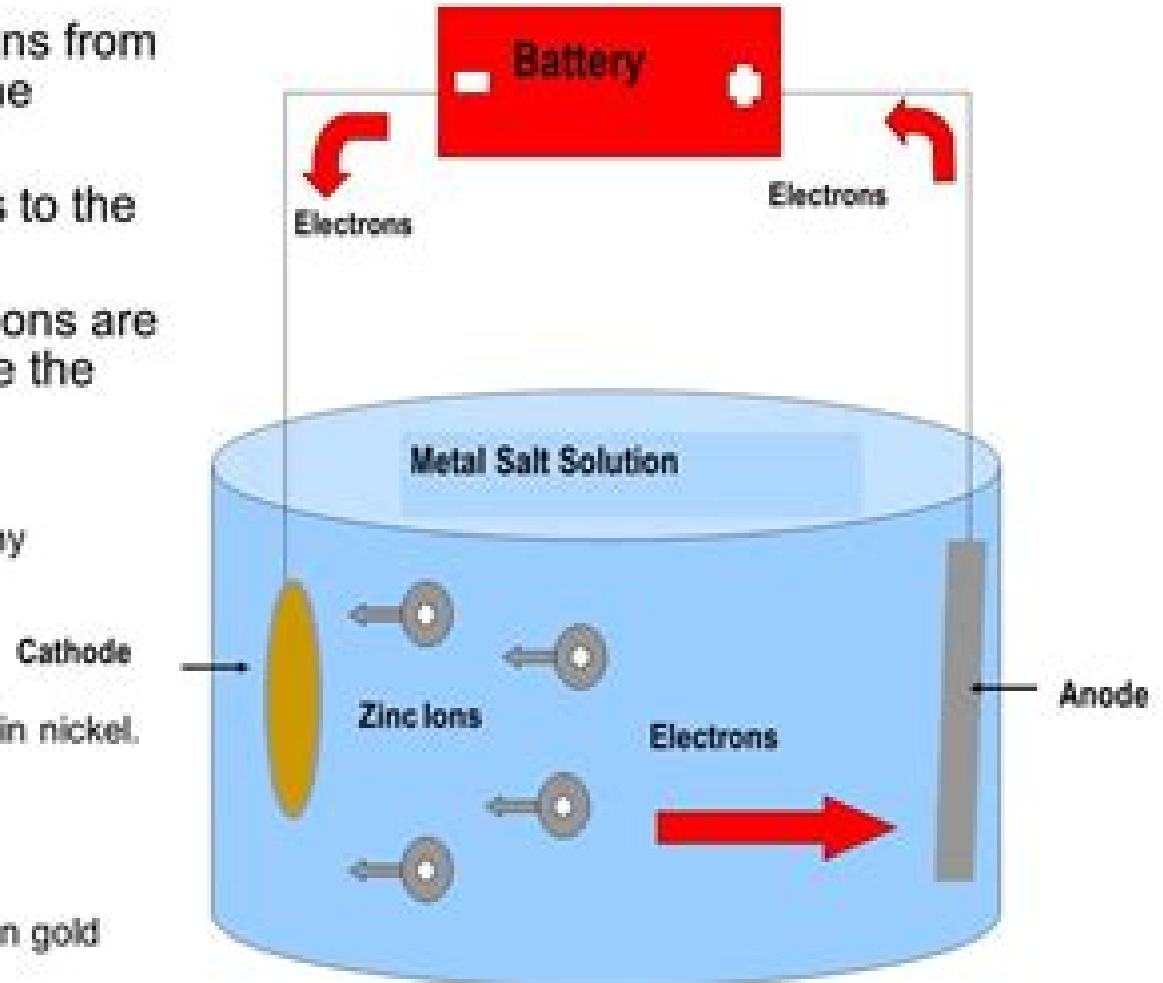

A regular unplated penny

A similar penny plated in nickel.

Another penny plated in gold

Practical Electro Plating

William Lyon David Bedell

A decorative graphic element consisting of a red circular shape with a white center, partially obscured by a white horizontal bar that extends from the left edge of the slide.
