Management of Deteriorating Concrete Structures George Somerville, 2008-02-14 Demolishing and rebuilding is becoming less and less of an option and developing trends such as the growth of PFI are directing attention to whole life costing With the relentless drive towards greater sustainability proper asset management of the existing infrastructure will become increasingly important in the future This authoritative book describes the management of concrete structures buildings and infrastructure as part of their business goals or the service objectives of their organization best practice in the management of concrete structures their responsibilities with respect to the management of their concrete structures the wider context and issues of service life design information and direction needed by the supporting professional team of architects engineers specifiers contractors and others This Guide also provides background information on topics such as deterioration processes and technical procedures used for the management of concrete structures including reference to international standards for the protection and repair of concrete structures These activities are illustrated by application examples case histories and by a section addressing frequently asked questions A brief review is made of some potential future developments

Guide for Protection and Repair of Concrete Structures FIB - International Federation for Structural Concrete, 2022-03-01 The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM5 Structural Service Life Aspects being the goal of the then TG5 9 After a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took place on June 2017 a different approach was proposed to push forward the task of TG8 1 formerly TG5 9 The new goal of TG 8 1 was to deliver a how to do guide gathering together protection repair and strengthening techniques for concrete structures Chapters are intended to provide both guidelines and case studies serving as support to the application of fib MC2020 pre normative specifications Each chapter was written by an

editorial team comprising desirably at least a researcher a designer and a contractor Templates have been prepared in order to harmonize the contents and the presentation of the different methods Following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by COM8 and TG3 4 members as well as by different practitioners For each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed It then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities Due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods We would like to thank the authors reviewers and members of COM8 and TG3 4 for their work in developing this fib Bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities As noted above this Bulletin is also intended to act as a background and supporting document to the next edition of the fib Model Code for Concrete Structures which is currently under development under the auspices of TG10 1 with the working title of fib Model Code 2020 Civil Engineering Structures According to the Eurocodes Xavier Lauzin, 2017-07-19

This standard assumes that the structure after completion is used as intended in the project and subject to planned inspection and maintenance to meet the expected project lifetime and to detect any unforeseen weakness or behavior EN 13670 4 1 An important decision factor in the design of new structures and repairs to existing structures is the lifetime or expected service life This concept which is common for civil engineering works has been extended to all engineering and building works by applying the European Structural Design Codes This book tries to take stock of the inspection methodologies related to each type of civil engineering work the various pathologies of concrete structures and gives examples of the writing of reports **Advanced Fibre-Reinforced Polymer (FRP) Composites for Structural**

Case Studies of Rehabilitation, Repair, Retrofitting, and Strengthening of Structures Mourad M. Bakhoun,2010 **Concrete Repair** Michael G. Grantham,2011-04-05 Concrete is an inherently complex material to produce and an even more complex material to repair With growing pressure to maintain the built environment and not simply to demolish and rebuild the need to repair concrete buildings and other structures is increasing and is expected to become of greater importance in the future This straightforward book serves as a practical guide to engineers on the processes to be followed in commissioning a concrete repair It stresses the need to fully understand the cause extent and location of the problem by appropriate insitu and laboratory testing And it outlines the steps to a successful repair It includes sections on the different repair techniques giving good practical advice as to where and when to use them and the warns of the pitfalls of their incorrect use It also includes an up to date guide on the current standards for repair and provides a good bibliography on other sources of information and books on the various techniques
