Trace Elements in Man and Animals--9 National Research Council Canada,1997 Presents papers from an international meeting of specialists from a variety of disciplines sharing an interest in trace elements The papers are organized into broad categories covering such topics as trace element interactions in the food supply and nutrition trace elements and genetic regulation trace elements in pregnancy and lactation assessment of trace element status kinetic modelling trace elements in the environment and food supply trace elements brain function and behaviour membrane function and cell signalling analytical experimental and isotopic techniques ethics of trace element research defining trace element requirements of infants trace element intervention studies trace elements and animal production free radical mediated disease and food and nutrition policy analytical quality control infection and immune function trace element binding proteins trace elements in growth and metabolism mechanisms of trace element toxicity and metabolic and physiological consequences of trace element deficiencies *Mathematical Modeling in Experimental Nutrition* Andrew J. Clifford,Hans-Georg Müller,2013-11-21 Nutrients have been recognized as essential for maximum growth successful reproduction and infection prevention since the 1940s since that time the lion s share of nutrient research has focused on defining their role in these processes Around 1990 however a major shift began in the way that researchers viewed some nutrients particularly the vitamins This shift was motivated by the discovery that modest declines in vitamin nutritional status are associated with an increased risk of ill health and disease such as neural tube defects heart disease and cancer especially in those populations or individuals who are genetically predisposed In an effort to expand upon this new understanding of nutrient action nutritionists are increasingly turning their focus to the mathematical modeling of nutrient kinetic data The availability of suitably tagged isotope nutrients such as B carotene vitamin A folate among others sensitive analytical methods to trace them in humans mass spectrometry and accelerator mass spectrometry and powerful software capable of solving and manipulating differential equations efficiently and accurately has allowed researchers to construct mathematical models aimed at characterizing the dynamic and kinetic behavior of key nutrients in vivo in humans at an unparalleled level of detail **Kinetic Models of Trace Element and Mineral Metabolism During Development** K.
