Mathematical Tools In Production Management:

Mathematical Tools in Production Management Jean-Marie Proth, Herve P. Hillion, 1990-07-31 The authors of this book have been in charge of over thirty industrial contracts of various length from six months to three years the companies involved covered a wide range of industrial activities including steel making hot and cold rolling aerospace research automobile manufacturing chemical manufacturing coal mining bronze casting and mechanical engineering All contracts were related to problems connected either with the preliminary design of production systems or with the management of these systems The problems that the authors investigated involved not only designing and scheduling but also the modeling analysis and evaluation of production systems The book is based to a large extent on the experience gained in working on these contracts and the mathematical procedures presented are those that have been applied during the course of work on at least one of the contracts Moreover the authors have always kept in mind an idea which seems pivotal in the world of industry the difficulty in companies lies much more in determining the exact nature of a problem and defining the criteria to be taken into account than in solving the problem itself

Advanced Models for Manufacturing Systems Management A Villa,1995-09-19 This book presents the mathematical models applicable to manufacturing systems management covering problems from production to real time control It explores manufacturing systems from the viewpoints of both physical structure and performance measures Two broad classes of mathematical models are covered in detail Generative models which yield a set of decision variables optimizing a performance measure based on mathematical optimization Evaluative models which evaluate some performance measures as a function of some predefined decision strategy Within this class Petri Nets and Queueing Networks are discussed Advanced Models for Manufacturing Systems Management describes dynamic systems modeling by state equations a unifying framework for a wide variety of models The text reference stresses model building but it examines model solving as well Computational techniques are illustrated such as linear programming branch and bound methods and dynamic programming Particular emphasis is given to the development of heuristic methods from mathematical models The book provides readers with valuable tools for management and design The use of descriptive models within an optimization algorithm is considered Numerous examples illustrate theoretical concepts throughout text Appendices are given at the end of the book in order to recall fundamentals such as linear programming and graph theory Appendices also appear within each chapter In this way readers can follow the main reading path without getting involved with details these appendices can be read at a later time This textual structure makes this book particularly well suited for self study Advanced Models for Manufacturing Systems Management is beneficial reading for both students and practitioners

Manufacturing Systems Engineering Katsundo Hitomi,2017-10-19 This second edition of the classic textbook has been written to provide a completely up to date text for students of mechanical industrial manufacturing and production engineering and is an indispensable reference for professional industrial engineers and managers In his outstanding book Professor Katsundo Hitomi integrates three key themes into the text manufacturing technology production management industrial economics Manufacturing technology is concerned with the flow of materials from the acquisition of raw materials through conversion in the workshop to the shipping of finished goods to the customer Production management deals with the flow of information by which the flow of materials is managed efficiently through planning and control techniques Industrial economics focuses on the flow of production costs aiming to minimise these to facilitate competitive pricing Professor Hitomi argues that the fundamental purpose of manufacturing is to create tangible goods and it has a tradition dating back to the prehistoric toolmakers The fundamental importance of manufacturing is that it facilitates basic existence it creates wealth and it contributes to human happiness manufacturing matters Nowadays we regard manufacturing as operating in these other contexts beyond the technological It is in this unique synthesis that Professor Hitomi s study constitutes a new discipline
