Mathematics Of Surfaces II:

Mathematics of Surfaces XII Ralph Martin, 2007-08-22 This book constitutes the refereed proceedings of the 12th IMA International Conference on the Mathematics of Surfaces held in Sheffield UK in September 2007 The 22 revised full papers presented together with 8 invited papers were carefully reviewed and selected from numerous submissions Among the topics addressed is the applicability of various aspects of mathematics to engineering and computer science especially in domains such as computer aided design computer vision and computer graphics The papers cover a range of ideas from underlying theoretical tools to industrial uses of surfaces Research is reported on theoretical aspects of surfaces including topology parameterization differential geometry and conformal geometry and also more practical topics such as geometric tolerances computing shape from shading and medial axes for industrial applications Other specific areas of interest include subdivision schemes solutions of differential equations on surfaces knot insertion surface segmentation surface deformation and surface fitting

The Mathematics of Surfaces IX Roberto Cipolla, Ralph Martin, 2012-12-06 These proceedings collect the papers accepted for presentation at the bien nial IMA Conference on the Mathematics of Surfaces held in the University of Cambridge 4 7 September 2000 While there are many international conferences in this fruitful borderland of mathematics computer graphics and engineering this is the oldest the most frequent and the only one to concentrate on surfaces Contributors to this volume come from twelve different countries in Europe North America and Asia Their contributions reflect the wide diversity of present day applications which include modelling parts of the human body for medical purposes as well as the production of cars aircraft and engineering components Some applications involve design or construction of surfaces by interpolating or approximating data given at points or on curves Others consider the problem of reverse engineering giving a mathematical description of an already constructed object We are particularly grateful to Pamela Bye at the Institut de Mathématiques and its Applications for help in making arrangements Stephanie Harding and Karen Barker at Springer Verlag London for publishing this volume and to Kwan Yee Kenneth Wong Cambridge for his heroic help with compiling the proceedings and for dealing with numerous technicalities arising from large and numerous computer files Following this Preface is a listing of the programme committee who with the help of their colleagues did much work in refereeing the papers for these proceedings

Mathematics of Surfaces Michael J. Wilson, Ralph R. Martin, 2003-11-03 This book constitutes the refereed proceedings of the 10th IMA International Conference on the Mathematics of Surfaces held in Leeds UK in September 2003 The 25 revised full papers presented were carefully reviewed and selected from numerous submissions Among the topics addressed are triangulated surface parameterization bifurcation structures control vertex computation polyhedral surfaces watermarking 3D polygonal meshed subdivision surfaces surface reconstruction vector transport shape from shading surface height recovery algebraic surfaces box splines the Plateau Bezier problem spline geometry generative geometry manifold representation affine arithmetic and PDE surfaces

Ralph R. Martin, 2009-08-06 This book constitutes the refereed proceedings of the 13th IMA International Conference on the Mathematics of Surfaces held in York UK in September 2009 The papers in the present volume include seven invited papers as well as 16 submitted papers The topics covered include subdivision schemes and their continuity polar patchworks compressive algorithms for PDEs surface invariant functions swept volume parameterization Willmore flow computational conformal geometry heat kernel embeddings and self organizing maps on manifolds mesh and manifold construction editing flattening morphing and interrogation dissection of planar shapes symmetry processing morphable models computation of isophotes point membership classification and vertex blends Surface types considered encompass polygon meshes as well as parametric and implicit surfaces

Minimal Surfaces II Ulrich Dierkes, Stefan Hildebrandt, Albrecht Küster, Ortwin Wohlrab, 2013-03-14 Minimal Surfaces I is an introduction to the field of minimal surfaces and a presentation of the classical theory as well as of parts of the modern development centered around boundary value problems Part II deals with the boundary behaviour of minimal surfaces Part I is particularly apt for students who want to enter this interesting area of analysis and differential geometry which during the last 25 years of mathematical research has been very active and productive Surveys of various subareas will lead the student to the current frontiers of knowledge and can also be useful to the researcher The lecturer can easily base courses of one or two semesters on differential geometry on Vol 1 as many topics are worked out in great detail Numerous computer generated illustrations of old and new minimal surfaces are included to support intuition and imagination Part 2 leads the reader up to the regularity theory for nonlinear elliptic boundary value problems illustrated by a particular and fascinating topic There is no comparably comprehensive treatment of the problem of boundary regularity of minimal surfaces available in book form This long awaited book is a timely and welcome addition to the mathematical literature

Mathematical Methods for Curves and Surfaces Morten Dæhlen, Michael S. Floater, Tom Lyche, Jean-Louis Merrien, Knut Morken, Larry L. Schumaker, 2010-03-02 This volume constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Mathematical Methods for Curves and Surfaces MMCS 2008 held in T nsberg Norway in June July 2008 The 28 revised full papers presented were carefully reviewed and selected from 129 talks presented at the conference The topics addressed by the papers range from mathematical analysis of various methods to practical implementation on modern graphics processing units

Minimal Surfaces II Jean Constant, 2022-08-09 A 52 illustration two part book on the exploration of minimal surfaces Part 1 explores the surfaces from an artistic perspective and Part 2 reproduces the equations that stand in their own right as a beautiful expression of pure geometry Each book includes notes from an informal work in progress diary and references that direct the reader to the images original mathematical sources Both sides complement each other in helping us better appreciate these unrivaled expressions of our environment from butterflies to black holes studied in statistics materials science and architecture but rarely in art

Mathematical Methods in Computer Aided Geometric Design II Tom Lyche, Larry L. Schumaker, 2014-05-10 Mathematical

Methods in Computer Aided Geometric Design II covers the proceedings of the 1991 International Conference on Curves Surfaces CAGD and Image Processing held at Biri Norway This book contains 48 chapters that include the topics of blossoming cyclides data fitting and interpolation and finding intersections of curves and surfaces Considerable chapters explore the geometric continuity geometrical optics image and signal processing and modeling of geological structures The remaining chapters discuss the principles of multiresolution analysis NURBS offsets radial basis functions rational splines robotics spline and Bzier methods for curve and surface modeling subdivision terrain modeling and wavelets This book will prove useful to mathematicians computer scientists and advance mathematics students

Symplectic 4-Manifolds and Algebraic Surfaces Fabrizio Catanese, Denis Auroux, Gang Tian, Marco Manetti, Paul Seidel, Bernd Siebert, Ivan Smith, 2008-04-17 Modern approaches to the study of symplectic 4 manifolds and algebraic surfaces combine a wide range of techniques and sources of inspiration Gauge theory symplectic geometry pseudoholomorphic curves singularity theory moduli spaces braid groups monodromy in addition to classical topology and algebraic geometry combine to make this one of the most vibrant and active areas of research in mathematics It is our hope that the five lectures of the present volume given at the C I M E Summer School held in Cetraro Italy September 2 10 2003 will be useful to people working in related areas of mathematics and will become standard references on these topics The volume is a coherent exposition of an active field of current research focusing on the introduction of new methods for the study of moduli spaces of complex structures on algebraic surfaces and for the investigation of symplectic topology in dimension 4 and higher

Geometric Complex Analysis - Proceedings Of The Third International Research Institute Of Mathematical Society Of Japan J

Noguchi, Hirotaka Fujimoto, J Kajiwar, Takeo Ohsawa, 1996-05-09 This proceedings is a collection of articles in several complex variables with emphasis on geometric methods and results which includes several survey papers reviewing the development of the topics in these decades Through this volume one can see an active field providing insight into other fields like algebraic geometry dynamical systems and partial differential equations
