Mathematics An Activity Approach:

Mathematics, an Activity Approach Albert B. Bennett, Leonard T. Nelson, 1985-01-01 *Mathematics* Albert B. Bennett (Jr), 1979 **Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers** Nicholas H. Wasserman, 2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra **Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers** is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics

Mathematics and Its Connections to the Arts and Sciences (MACAS) Claus Michelsen, Astrid Beckmann, Viktor Freiman, Uffe Thomas Jankvist, Annie Savard, 2022-12-19 This book celebrates the 15th anniversary of the bi annual symposium series Mathematics and its Connections to the Arts and Sciences MACAS which was first held in 2005 following the continued collaboration of an international group of researchers from ICME Topic Study Group 21 The MACAS conferences bring together scientists and educators who are interested in the connection between mathematics arts and science in educational curriculum while emphasizing on as well as researching about the role of mathematics By pooling together these different approaches and viewpoints between mathematics arts and sciences this book reveals possible synergies and paths for collaborations In view of the challenges of the 21st century a modern approach to education with a focus on multi and interdisciplinarity is more important than ever The role of mathematics assumes a key role in this approach as it is connected to all other disciplines such as STEM education physics chemistry biology aesthetics and language and can serve as a bridge between them This book discusses amongst others the curricular approaches to integrate mathematics and other disciplines the importance of mathematical modelling and the

interdisciplinarity ways for learning and studying of mathematics as well as the intercultural dimensions of mathematics and mathematics in the digital era All topics will be presented from very different perspectives and regarding very different contexts including digitization culture and sustainability This unique collection will serve as a very valuable and compact source for all above mentioned scientists and educators as well as for use in advanced teacher education courses

Computational Experiment Approach to Advanced Secondary Mathematics Curriculum Sergei Abramovich, 2014-05-08 This book promotes the experimental mathematics approach in the context of secondary mathematics curriculum by exploring mathematical models depending on parameters that were typically considered advanced in the pre digital education era This approach by drawing on the power of computers to perform numerical computations and graphical constructions stimulates formal learning of mathematics through making sense of a computational experiment It allows one in the spirit of Freudenthal to bridge serious mathematical content and contemporary teaching practice In other words the notion of teaching experiment can be extended to include a true mathematical experiment When used appropriately the approach creates conditions for collateral learning in the spirit of Dewey to occur including the development of skills important for engineering applications of mathematics In the context of a mathematics teacher education program the book addresses a call for the preparation of teachers capable of utilizing modern technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the improvement of the whole STEM education at the secondary level By the same token using the book's pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession
