Mathematics Education And Language Interpreting Hermeneutics And Poststructuralism:

Mathematics Education and Language Tony Brown, 2012-12-06 Contemporary thinking on philosophy and the social sciences has primarily focused on the centrality of language in understanding societies and individuals important developments which have been under utilised by researchers in mathematics education In this revised and extended edition this book reaches out to contemporary work in these broader fields adding new material on how progression in mathematical learning might be variously understood A new concluding chapter considers how teachers experience the new demands they face

MasterClass in Mathematics Education Paul Andrews, Tim Rowland, 2013-11-21 MasterClass in Mathematics Education provides accessible links between theory and practice and encourages readers to reflect on their own understanding of their teaching context Each chapter written by an internationally respected authority explores the key concepts within the selected area of the field drawing directly on published research to encourage readers to reflect on the content ideas and ongoing debates Using international case studies each chapter will encourage readers to think about ways that the teaching and learning of mathematics reflect different cultural traditions and expectations and enable them to evaluate effective strategies for their own contexts

Deconstructing Social and Cultural Meanings Agnes Macmillan, 2001 This book provides a model and study guide for students undertaking educational and other social science research It demonstrates the use of the postmodern constructs of positioning discursive strategies and agency in order to explain their meanings and the interpretive processes involved in their application The research base of the book examines issues of access and equity in the historical and cultural construction of numerate identities for one group of preservice teachers

Back cover *The Psychology of Mathematics Education*, 2008-01-01 This book paints an alternative and contemporary portrait of psychology within mathematics education drawing on psychoanalytic practices and theory Mathematics education is still a fairly new social science that began as an adjunct to the practice of mathematics in schools some forty years ago defined by a marriage with cognitive psychology As a consequence school mathematics has often been seen as a scientific enterprise centred on the operation of individual minds confronting mathematical ideas Meanwhile psychoanalysis had earlier come into existence through the work of Sigmund Freud And for much of his life Freud had similarly seen his work as scientific a view that later fuelled mainstream practices in psychology Yet Freud's engagement with his patients combined with his literary capabilities produced surprising results defining humans in ways that transcended mere scientific assessment Rather his accounts of humans weaved a rich social tapestry in which individuals were understood relationally to those who shared their world And through re telling the story lines of their lives individuals were able to create alternative futures This dimension of Freud's work provoked an alternative tradition best exemplified in the work of Lacan in which narrative based understandings linking humans to the social world replaced cognitive models centred on controlling individuals through particular understandings of normality Through its eleven chapters this book provides accounts of how children teachers

researchers and mathematical learning can be understood differently towards emphasising how they are each consequential to the many ways in which the world can be created and described

Meaning in Mathematics Education Jeremy Kilpatrick, Celia Hoyles, Ole Skovsmose, 2006-03-30 What does it mean to know mathematics How does meaning in mathematics education connect to common sense or to the meaning of mathematics itself How are meanings constructed and communicated and what are the dilemmas related to these processes There are many answers to these questions some of which might appear to be contradictory Thus understanding the complexity of meaning in mathematics education is a matter of huge importance There are twin directions in which discussions have developed theoretical and practical and this book seeks to move the debate forward along both dimensions while seeking to relate them where appropriate A discussion of meaning can start from a theoretical examination of mathematics and how mathematicians over time have made sense of their work However from a more practical perspective anybody involved in teaching mathematics is faced with the need to orchestrate the myriad of meanings derived from multiple sources that students develop of mathematical knowledge This book presents a wide variety of theoretical reflections and research results about meaning in mathematics and mathematics education based on long term and collective reflection by the group of authors as a whole It is the outcome of the work of the BACOMET Basic COmponents of Mathematics Education for Teachers group who spent several years deliberating on this topic The ten chapters in this book both separately and together provide a substantial contribution to clarifying the complex issue of meaning in mathematics education This book is of interest to researchers in mathematics education graduate students of mathematics education under graduate students in mathematics secondary mathematics teachers and primary teachers with an interest in mathematics

Third International Handbook of Mathematics Education M.A. (Ken) Clements, Alan Bishop, Christine Keitel-Kreidt, Jeremy Kilpatrick, Frederick Koon-Shing Leung, 2012-11-15 The four sections in this Third International Handbook are concerned with a social political and cultural dimensions in mathematics education b mathematics education as a field of study c technology in the mathematics curriculum and d international perspectives on mathematics education These themes are taken up by 84 internationally recognized scholars based in 26 different nations Each of section is structured on the basis of past present and future aspects The first chapter in a section provides historical perspectives How did we get to where we are now the middle chapters in a section analyze present day key issues and themes Where are we now and what recent events have been especially significant and the final chapter in a section reflects on policy matters Where are we going and what should we do Readership Teachers mathematics educators ed policy makers mathematicians graduate students undergraduate students Large set of authoritative international authors

Critical Issues in Mathematics Education Philip Clarkson, Norma C. Presmeg, 2008-09-22 Critical Issues in Mathematics Education presents the significant contributions of Professor Alan Bishop within the mathematics education research community Six critical issues each of which have had paramount importance in the development of mathematics education research are

reviewed and include a discussion of current developments in each area Teacher decision making spatial visualizing geometry teachers and research cultural social aspects of mathematics education sociopolitical issues and values serve as the basic issues discussed in this examination of mathematics education over the last fifty years during which Professor Bishop has been active in the field A comprehensive discussion of each of these topics is realized by offering the reader a classic research contribution of Professor Bishop s together with commentary and invited chapters from leading experts in the field of mathematics education Critical Issues in Mathematics Education will make an invaluable contribution to the ongoing reflection of mathematic education researchers worldwide but also to policy makers and teacher educators who wish to understand some of the key issues with which mathematics education has been and still is concerned and the context within which Professor Bishop s key contributions to these research issues were made

Ongoing Advancements in Philosophy of Mathematics Education Maria Aparecida Viggiani Bicudo, Bronislaw Czarnocha, Maurício Rosa, Małgorzata Marciniak, 2023-09-30 *Ongoing Advancements in Philosophy of Mathematics Education* approaches the philosophy of mathematics education in a forward movement analyzing reflecting and proposing significant contemporary themes in the field of mathematics education The theme that gives life to the book is philosophy of mathematics education understood as arising from the intertwining between philosophy of mathematics and philosophy of education which through constant analytical and reflective work regarding teaching and learning practices in mathematics is materialized in its own discipline philosophy of mathematics education This is the field of investigation of the chapters in the book The chapters are written by an international cohort of authors from a variety of countries regions and continents Some of these authors work with philosophical and psychological foundations traditionally accepted by Western civilization Others expose theoretical foundations based on a new vision and comprising innovative approaches to historical and present day issues in educational philosophy The final third of the book is devoted to these unique and innovative research stances towards important and change resistant societal topics such as racism technology gaps or the promotion of creativity in the field of mathematics education

Collaborating to Meet Language Challenges in Indigenous Mathematics Classrooms Tamsin Meaney, Tony Trinick, Uenuku Fairhall, 2011-10-03 Language can be simultaneously both a support and a hindrance to students learning of mathematics When students have sufficient fluency in the mathematics register so that they can discuss their ideas they become chiefs who are able to think mathematically However learning the mathematics register of an Indigenous language is not a simple exercise and involves many challenges not only for students but also for their teachers and the wider community *Collaborating to Meet Language Challenges in Indigenous Mathematics Classrooms* identifies some of the challenges political mathematical community based and pedagogical to the mathematics register faced by an Indigenous school in this case a M ori immersion school It also details the solutions created by the collaboration of teachers researchers and community members
