Maths And Me:

How I Wish I Had Taught Maths: Reflections on research, conversations with experts, and 12 years of mistakes Craig Barton, 2018-01-01 I genuinely believe I have never taught mathematics better and my students have never learned more I just wish I had known all of this twelve years ago Craig Barton is one of the UK's most respected teachers of mathematics In his remarkable new book he explains how he has delved into the world of academic research and emerged with a range of simple practical effective strategies that anyone can employ to save time and energy and have a positive impact on the long term learning and enjoyment of students Craig presents the findings of over 100 books and research articles from the fields of Cognitive Science Memory Psychology and Behavioural Economics together with the conversations he has had with world renowned educational experts on his Mr Barton Maths Podcast and subsequent experiments with my students and colleagues

Mathematical Subjects Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children's mathematical achievement against identified benchmarks and each other

Mathematics With Love M. Stopes-Roe, 2017-05-15 In 1922 Barnes Wallis FRS who later invented the transatlantic airship and the bouncing bomb immortalized in the movie *The Dam Busters* fell in love for the first and last time aged 35 The object of his affection Molly Bloxam was 17 and setting off to study science at University College London Her father decreed that the two could correspond only if Barnes taught Molly mathematics in his letters *Mathematics with Love* presents for the first time the result of this curious diktat a series of witty tender and totally accessible introductions to calculus trigonometry and electrostatic induction that remarkably wooed and won the girl Deftly narrated by Barnes and Molly's daughter Mary *Mathematics with Love* is an evocative tale of a twenties

courtship a surprising insight into the early life of an engineering genius and a great way to learn a little mathematics

Burton, 2003-02-28 This contributed volume explores equity and social justice within the field of mathematics education In part one Helga Jungwirth's introductory chapter provides a strong theoretical overview that is based in actual classroom behaviors and a typology that classifies the various interpretations found within this volume Also in part one Laurie Hart discusses developments in equity research in the United States Part two focuses on results of studies about social justice and their impact on learning in mathematics classrooms in various parts of the world For example in a chapter on Peru social justice does not just encompass gender but also inequalities in opportunities to learn such as problems of resources living and social conditions communal demands and language needs And part three focuses on computers as a resource to mathematics teaching The contributors raise several important social justice issues which have previously remained

unresearched Although there are a number of chapters specifically dealing with gender many of the authors use one of the following strategies their gender specific questions are set in a wider socio cultural context they challenge what have threatened to become false orthodoxies or they raise other important issues These other issues include the meaning of democratic citizenship for mathematics classrooms the links between parents and children learning mathematics and the preconceptions of some teachers of underprivileged students in Australia Other chapters explore different forms of classroom communication participation and assessment The pieces on computers state that there is still not enough research to conclude whether computers in the mathematics classrooms are supportive of or detrimental to the learning of all students The one thing on which every author in this volume does agree is that social justice in mathematics education has still not been attained but that we must strive toward it to improve educational practices and society in general

Becoming a Mathematics Teacher Tony Brown,Olwen McNamara,2011-02-08 The book is centered on how major curriculum reform shapes mathematics and the professional practices of teachers This book documents in real time the implementation of a major government numeracy programme and its receipt by trainee and new teachers It documents the complete life span of that initiative The account is targeted at an international readership in terms of how curriculum reform more generally shapes mathematics in schools and the practices of teachers A key dimension of the book is an alternative view of mathematics education research in which the task of teacher development is understood at policy level where large numbers of teachers were interviewed to assess how policies were being processed through individuals The book provides an easy and accessible commentary utilising contemporary theory to describe how such teachers reconcile their personal aspirations with the external demands they encounter in negotiating their identities as professional teachers

Large-Scale Studies in Mathematics Education James A. Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies

Mathematical Relationships in Education Laura Black,Heather Mendick,Yvette Solomon,2011-01-13 While demand for

the mathematically literate citizen increases many learners continue to reject mathematics and experience it as excluding and exclusive even when they succeed at it In exploring this phenomenon this volume examines the ways in which learners form particular relationships with mathematics in the context of formal schooling **The Reflective Learner** NEERAJA RAGHAVAN, 2019-11-18 Is there a way of exploring the work of students beyond just right and wrong If mistakes are an important part of the learning process do they need to be explored deeply Does a teacher stand to gain a better understanding of the workings of her students minds if an attempt is made to systematically examine the thought process behind every mistake What is the hidden takeaway missed take in every mistake for a student as well as a teacher Four teachers two language two maths examined such questions as part of their action research into students mistakes and eventually effected a turnaround in the way that their struggling students began to approach subjects like English and mathematics In this compilation of four engaging journeys the impact of such an investigation on both the teacher and the taught emerges as teachers begin to gain new insights into their own mental biases and tacit assumptions students too begin to loosen their grip on age old fears and prejudices the phobia s slowly giving way to the desire to look for stimulating challenges There is also a roadmap for teachers who wish to try such an exploration in their own classes in order to empower students to turn into reflective learners
