

The Universe is a continuum with the equations of physics representing one universal geometrical process.

$$a^2 + b^2 = c^2,$$

The Pythagoras Theorem is a fundamental physical reality within the theory of Relativity

$$E^2 = (MC^2)^2 + (pC)^2$$

$$e^{i\pi} + 1 = 0$$

Euler Identity is interwoven into the dynamic fabric of space & time. With one photon equals zero 'the moment of now' within an individual reference frame.

Time dilation equation

$$\gamma = \frac{1}{\sqrt{1 - v^2/c^2}}$$

Energy ΔE slows the rate that time Δt flows as a process of continuous creation relative to the energy & momentum of each object or life form. Mass will increase relative to this with time dilation as part of the process that at the largest scale is seen as an ever expanding Universe.

$$\Delta E \Delta t \geq h/2\pi$$

Time is a variable with an uncertain future relative to the energy of our own actions.

Light sphere 4π of potential future uncertainty

Multiplying by the imaginary number i is a rotation.

The Arrow of Time

The Planck constant represents a constant of action in the geometrical process that we see and feel as time

$$F = K \frac{q_1 q_2}{r^2}$$

$$F = G \frac{m_1 m_2}{r^2}$$

We have the inverse square law in gravity and electromagnetism because gravitation is a secondary force to electromagnetism.

$K = 1/4\pi\epsilon$ Boltzmann's constant is a bridge between probability and entropy.

$E=MC^2$ is an approximation of $(E=M_0C^2)/\gamma$

$$E = \frac{Q}{4\pi\epsilon r^2}$$

$$\Delta x \Delta p_x \geq \frac{h}{4\pi}$$

Heisenberg's Uncertainty Principle represents the same uncertainty we have with any future event at the smallest scale of creation.

$$E_k = \frac{1}{2}mv^2$$

kinetic energy half the radius

$$PE = \frac{Qq}{4\pi\epsilon r}$$

Potential energy with the future unfolding photon by photon with each new photon electron coupling or dipole moment. This forms the movement of positive and negative of charge

$$T^2 = \frac{4\pi^2}{G(M_1 + M_2)} a^3$$

Kepler's third law of planetary motion 'the music of the spheres' with the elliptical orbits of the planets formed by a process of spherical symmetry forming and breaking.

$$(E = \gamma M_0 C^2)^\infty$$

Maths For Advanced Physics:

Maths for Advanced Physics Andrew Lambert, 1993 Written for students following A level or Higher Physics courses especially those who are not studying maths at an advanced level This practical handbook is not concerned with mathematical proofs or the origins or formulae but contains essential information about what maths to use when tackling problems in physics how to use it useful hints and possible pitfalls to watch out for Maths for Advanced Physics John Rounce, 2002 Written by teachers and fully covering the 2002 A Level maths specifications for biology this text is useful for both classroom work and homework exercises Relevant for AS and A2 Levels of study and designed to be accessible and friendly in format its aim is to provide clear and concise explanations of mathematical concepts and how these are then applied in biology Worked examples are included throughout encouraging students to grasp the subject matter with ease Examination style questions and answer sections provide an opportunity for continuous progression and to consolidate learning Principles of Advanced Mathematical Physics R.D. Richtmyer, 2012-12-06 *Advanced Methods of Mathematical Physics* Radhey Shyam Kaushal, D. Parashar, 2000 In an introductory style with many examples *Advanced Methods of Mathematical Physics* presents some of the concepts methods and tools that form the core of mathematical physics The material covers two main broad categories of topics 1 abstract topics such as groups topology integral equations and stochasticity and 2 the methods of nonlinear dynamics Principles of Advanced Mathematical Physics Robert D. Richtmyer, 1978 Mathematical Physics Solomon Grigor'evich Mikhlin, 1970 **Mathematical Physics** S.D. Joglekar, 2007-05-30 *Mathematical Physics Advanced Topics* is the second of a two volume set designed for senior undergraduate and postgraduate students The author provides detailed discussion of topics including partial differential equations ordinary differential equations special functions including gamma beta and Bessel functions classical orthogonal polynomials spherical harmonics generalized functions the Dirac delta function Fourier transforms group theory eigenvalues eigenvectors matrix representations and diagonalization of matrices complex variables analytic functions Taylor and Laurent series contour integrals residue theorem and applications and method of steepest descent Principles of advanced mathematical physics Robert Davis Richtmyer, 1978 **An Advanced Introduction to Calculus-Based Physics (Mechanics)** Chris McMullen, Chris McMullen, Ph.d., 2012-05-01 CONTENTS This textbook covers the mechanics portion of first semester calculus based physics AUDIENCE This calculus based physics textbook is geared toward independent learners who can handle the rigors of calculus and who seek to develop a strong introduction to the fundamentals of physics both mathematically and conceptually It could also serve as a useful reference for physics and engineering students who have gone beyond the first year of physics but who would like to review the fundamentals as they explore more advanced fields of physics This volume is dedicated to mechanics PREREQUISITES No previous exposure to physics is assumed The student should be familiar with the basic techniques of differentiation and integration including polynomials and trig

functions and should be fluent in algebra and familiar with the basic trig functions

COREQUISITES The textbook teaches Calculus II skills as needed such as the technique of integrating via trigonometric substitution The textbook also reviews some Calculus I skills which students often forget such as the mean value theorem l Hopital s rule and the chain rule This is not done in an introductory chapter or an appendix but in the main text as these ideas first become useful

IMPORTANT DISTINCTIONS Boxes of important distinctions are included in order to help students distinguish between similar concepts like average speed and average velocity between velocity and acceleration or between mass and weight

TABLE OF EQUATIONS There is a handy table of equations organized by topic on the back cover of the textbook The equations in the text but not on the cover also include notes to help students understand any limitations that the equations may have e g some equations only apply if acceleration is uniform or if mass is constant

CONCISE OUTLINE FORMAT The text is conveniently organized by specific topic to help students who may not be reading straight through but who may be searching for a specific idea or who may be reviewing material that they read previously There is also a handy index to help locate concepts quickly

Examples and problem solving strategies clearly stand out from discussions of concepts

MATHEMATICAL quality was favored over quantity Simple plug and chug examples and problems are scarce since the audience for this book is independent students

PRACTICE The end of each chapter has a good selection of instructive conceptual questions and practice problems

HINTS ANSWERS 100% of the conceptual questions have both hints and answers since it s crucial to develop a solid understanding of the concepts in order to succeed in physics Some of the practice problems have answers to help independent students gain confidence by reproducing the same answers while 100% of the practice problems have hints so that students can see if they are solving the problems correctly even if the problem doesn t have the answer in the back
