Matrix Analysis of Interregional Population Growth and Distribution Andrei Rogers,1968 Matrix Analysis of Interregional Population Growth and Distribution , *Advanced Techniques of Population Analysis* S.S. Halli,K.V. Rao,2013-06-29 Although I feel honored to write a foreword for this important book it is a task that I approach with some trepidation The topics covered in the book summarize the current state of the art in technical demography However my knowledge and expertise with respect to technical demography are limited to the most fundamental and intermediate level methods hence critical commentary on the contents of this volume is beyond my scope in this fore word Since I have some understanding of the logic and substantive aspects of the methods rather than the complicated mathematics used in describing them my comments will necessarily be restricted to the book s general organization and content To date most texts published on technical demography have been limited to traditional demographic methods sources and limitations of data life table construction and applications standardization techniques various methods for preparing population estimates and forecasts etc However population specialists have in recent years been developing and successfully applying a variety of sophisticated techniques not covered in the more standard introductory texts In addition many traditional methods that are unique to the demographic discipline have been improved and extended **Technologies for Migration and Commuting Analysis: Spatial Interaction Data Applications** Stillwell, John,Duke-Williams, Oliver,Dennett, Adam,2010-05-31 This book addresses the technical and data related side of studying population flows Provided by publisher Applied Multiregional Demography: Migration and Population Redistribution Andrei Rogers,2015-09-04 This book shows the effectiveness of multiregional demography for studying the spatial dynamics of migration and population redistribution It examines important questions in demographic analysis and shows how the techniques of multiregional analysis can lead to answers that sometimes contradict conventional wisdom The book reconsiders conclusions reached in the literature regarding several fundamental common sense demographic questions in migration and population redistribution including Is it mostly migration or aging in place that has been driving Florida s elderly population growth Do the elderly return home after retirement more than the non elderly do Does longer life lead to longer ill health Do simple population projection models outperform complex ones For each demographic question it reconsiders the book begins with a simple empirical numerical example and with it illustrates how a uniregional specification can bias findings to favor a particular and possibly incorrect conclusion It then goes on to show how a multiregional analysis can better illuminate the dynamics that underlie the observed population totals and lead to a more informed conclusion Offering insights into the effectiveness of multiregional demography this book serves as a valuable resource for students and researchers searching for a better way to answer questions in demographic analysis and population dynamics *Population Growth and Urban Systems Development* G.A. van der Knapp,2012-12-06 The study of the evolution of an urban system raises a number of practical questions as to the

operational definition of the components of the system as well as to the incorporation of the factor time in the analysis In this chapter the focus is on the urban centres the nodes of the urban system One of the first problems to be solved now is the definition of such a node It has been argued above that population size can be used as an approximation of the complexity of the spatial economic structure of a region The acceptance of this notion makes it possible to study the urban system as a population system The analysis of the population system over the study period will be pursued from this perspective The study period 1840-1970 covers completely the industrialization and urbanization phase which occurred during the industrial revolution Over this period the spatial organizational structure of society evolved from a rural commercial to wards a modern urban industrial state One of the major events in this period of change is the spatial redistribution of the population and the population growth This process will be examined below at three levels of aggregation 1 the population distribution as one frequency distribution 2 the population distribution disaggregated into a number of size classes and 3 the individual cities which make up the population distribution

Regional Demographic Development John Hobcraft, Philip Rees, 2017-09-05 Originally published in 1979 This volume brings together the work of distinguished demographers geographers statisticians and policy makers who look in detail at various mechanisms by which regional population structures develop The introduction deals with a synthesis of the area covered in the book and this is followed by the four major sections of population history fertility migration and population projections The book provides the reader with a comprehensive and unique picture of regional populations and demographic development viewed from a variety of temporal and methodological perspectives and will be of considerable value to all those connected with population studies and regional studies

Social Issues in Regional Policy and Planning Antoni Kuklinski, 2011-06-01 No detailed description available for Social Issues in Regional Policy and Planning

Unlocking Regional Innovation and Entrepreneurship Iréne Bernhard, Urban Gråsjö, Charlie Karlsson, 2021-06-25 Illuminating and timely this book explores several theoretical and empirical issues related to the potential for increasing capacities for innovation knowledge and entrepreneurship It highlights the current academic and political consensus that calls for policy interventions targeted towards more balanced inclusive and regionally cohesive growth

Land Use-Transport Interaction Models Rubén Cordera, Ángel Ibeas, Luigi dell'Olio, Borja Alonso, 2017-11-15 Transport and the spatial location of population and activities have been important themes of study in engineering social sciences and urban and regional planning for many decades However an integrated approach to the modelling of transport and land use has been rarely made and common practice has been to model both phenomena independently This book presents an introduction to the modelling of land use and transport interaction LUTI with a theoretical basis and a presentation of the broad state of the art It also sets out the steps for building an operational LUTI model to provide a concrete application The authors bring extensive experience in this cross disciplinary field primarily for an academic audience and for professionals seeking a thorough introduction
