M. Gladilin,1996 Detonation Process in Two Phase Media Transport Phenomena in Porous Media II I. Pop,Derek B Ingham,2002-06-20 Transport phenomena in porous media continues to be a field which attracts intensive research activity This is primarily due to the fact that it plays an important and practical role in a large variety of diverse scientific applications Transport Phenomena in Porous Media II covers a wide range of the engineering and technological applications including both stable and unstable flows heat and mass transfer porosity and turbulence Transport Phenomena in Porous Media II is the second volume in a series emphasising the fundamentals and applications of research in porous media It contains 16 interrelated chapters of controversial and in some cases conflicting research over a wide range of topics The first volume of this series published in 1998 met with a very favourable reception Transport Phenomena in Porous Media II maintains the original concept including a wide and diverse range of topics whilst providing an up to date summary of recent research in the field by its leading practitioners **Composite Media And Homogenization Theory: Proceedings Of The Second Workshop** Gianni Dal Maso,G Dell'antonio,1995-09-30 A rigorous mathematical treatment of the properties of composite materials has been made possible by recent mathematical results in the fields of partial differential equations and the calculus of variations The progress in the mathematical models for composite media has led to a deeper understanding of the overall behaviour of composite structures and to significant applications in physics and engineering including a new approach to optimal design problems Many new relevant results are presented in this volume which contains 16 invited papers from the Second Workshop on Composite Media and Homogenization Theory held at the International Centre for Theoretical Physics in Trieste Italy from September 20 to October 1 1993 Topics include homogenization of problems singularly depending on small or large parameters homogenization of nonlinear problems optimal bounds for effective moduli asymptotic analysis of problems in perforated domains laminate structures in phase transitions optimal design and relaxation Mathematicians and engineers interested in mathematical models of composite materials will find this book to be an important reference **Carbon Neutrality, Social Media, Artificial Intelligence,**

volume II Rita Yi Man Li,Xuefeng Shao,James Crabbe,2023-10-20 Carbon neutrality refers to net zero carbon emissions It can be achieved by reducing carbon emissions or increasing carbon adsorption The popularity of social media including Twitter YouTube and LinkedIn provides good channels for sharing relevant information and promoting sustainable carbon neutral living styles For example a motor company has launched social media challenges with Korean pop stars to raise awareness of carbon neutrality Social media provides real time information In Jakarta flood related tweet intensity during a flood peaked at about 900 tweets a minute during the floods of 2015 The tweets created real time maps that people sent a minute before Regarding government policies identification of problem areas is needed to help policymakers to resolve problems Machine learning can monitor these events by studying past records to know how countries and governments performed in a high risk event or environmental crisis and this data can be used to provide future recommendations to governments for policy making Additionally AI can analyze online unstructured data and predict various scenarios of carbon emissions and adsorptions using structured data The world of social media is a huge data source still yet to be fully optimized in science
