Visual Basic 2005 Made Simple Stephen Morris, 2017-10-03 Visual Basic .NET is the most recent version of Microsoft's language for creating Windows programs and developing Internet applications. Visual Basic .NET forms part of the .NET Framework, the development environment now used for all Microsoft programming languages. Visual Basic .NET is an enhanced edition of this popular language incorporating all the functionality of Visual Basic 6 but with the addition of new object-oriented features. Some of the terminology has changed in this new version of the product and the development environment has been enhanced but the main principles remain the same. Visual Basic .NET Made Simple is intended for new programmers as well as those who are upgrading from earlier versions of Visual Basic and those who have worked in different languages or environments and need to acquire new skills. No previous knowledge of Visual Basic, other languages or object-oriented programming is required. However, readers are expected to have a basic knowledge of Windows and its operation. Main topics covered include: Creating applications for Windows XP; Writing and testing Visual Basic .NET code; Accessing external databases; Developing Internet applications. *Specifications and Drawings of Patents Issued from the United States Patent Office* United States. Harmony and Dissent R. Bruce Elder, 2010-04-22 R. Bruce Elder argues that the authors of many of the manifestoes that announced in such lively ways the appearance of yet another artistic movement shared a common aspiration: they proposed to reformulate the visual, literary and performing arts so that they might take on attributes of the cinema. The cinema, Elder argues, became in the early decades of the twentieth century a pivotal artistic force around which a remarkable variety and number of aesthetic forms took shape. To demonstrate this, Elder begins with a wide-ranging discussion that opens up some broad topics concerning modernity's cognitive and perceptual regime with a view to establishing that a crisis within that regime engendered some peculiar and highly questionable epistemological beliefs and enthusiasms. Through this discussion, Elder advances the startling claim that a crisis of cognition precipitated by modernity engendered by way of response a peculiar sort of pneumatic spiritual epistemology. Elder then shows that early ideas of the cinema were strongly influenced by this pneumatic epistemology and uses this conception of the cinema to explain its pivotal role in shaping two key moments in early twentieth-century art: the quest to bring forth a pure objectless, non-representational art and Russian Suprematism, Constructivism and Productivism.
