Reasoning of Children and Adults Alina Galvão Spinillo, Síntria Labres Lautert, Rute Elizabete de Souza Rosa Borba, 2021-05-24 This book adopts an interdisciplinary approach to investigate the development of mathematical reasoning in both children and adults and to show how understanding the learner's cognitive processes can help teachers develop better strategies to teach mathematics This contributed volume departs from the interdisciplinary field of psychology of mathematics education and brings together contributions by researchers from different fields and disciplines such as cognitive psychology neuroscience and mathematics education The chapters are presented in the light of the three instances that permeate the entire book the learner the teacher and the teaching and learning process Some of the chapters analyse the didactic challenges that teachers face in the classroom such as how to interpret students reasoning the use of digital technologies and their knowledge about mathematics Other chapters examine students opinions about mathematics and others analyse the ways in which students solve situations that involve basic and complex mathematical concepts The approaches adopted in the description and interpretation of the data obtained in the studies documented in this book point out the limits the development and the possibilities of students thinking and present didactic and cognitive perspectives to the learning scenarios in different school settings Mathematical Reasoning of Children and Adults Teaching and Learning from an Interdisciplinary Perspective will be a valuable resource for both mathematics teachers and researchers studying the development of mathematical reasoning in different fields such as mathematics education educational psychology cognitive psychology and developmental psychology **Mathematical Learning and Cognition in Early Childhood** Katherine M.

Robinson, Helena P. Osana, Donna Kotsopoulos, 2019-05-07 This book explores mathematical learning and cognition in early childhood from interdisciplinary perspectives including developmental psychology neuroscience cognitive psychology and education It examines how infants and young children develop numerical and mathematical skills why some children struggle to acquire basic abilities and how parents caregivers and early childhood educators can promote early mathematical development The first section of the book focuses on infancy and toddlerhood with a particular emphasis on the home

[Linguistic Influences on Mathematical Cognition](#) Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic

 Mathematics Education - 2 Volumes* Bharath Sriraman, Jinfa Cai, Kyeonghwa Lee, Lianghuo Fan, Yoshinori Shimizu, Chap Sam
 Lim, K. Subramaniam, 2015-08-01 Mathematics and Science education have both grown in fertile directions in different
 geographic regions Yet the mainstream discourse in international handbooks does not lend voice to developments in
 cognition curriculum teacher development assessment policy and implementation of mathematics and science in many
 countries Paradoxically in spite of advances in information technology and the flat earth syndrome old distinctions and biases
 between different groups of researcher s persist In addition limited accessibility to conferences and journals also contribute
 to this problem The International Sourcebooks in Mathematics and Science Education focus on under represented regions of
 the world and provides a platform for researchers to showcase their research and development in areas within mathematics
 and science education The First Sourcebook on Asian Research in Mathematics Education China Korea Singapore Japan
 Malaysia and India provides the first synthesized treatment of mathematics education that has both developed and is now
 prominently emerging in the Asian and South Asian world The book is organized in sections coordinated by leaders in
 mathematics education in these countries and editorial teams for each country affiliated with them The purpose of unique
 sourcebook is to both consolidate and survey the established body of research in these countries with findings that have
 influenced ongoing research agendas and informed practices in Europe North America and other countries in addition to
 serving as a platform to showcase existing research that has shaped teacher education curricula and policy in these Asian
 countries The book will serve as a standard reference for mathematics education researchers policy makers practitioners and
 students both in and outside Asia and complement the Nordic and NCTM perspectives Preparation Master CTET Paper 1

 31st July 2016 at the University of Hamburg in Hamburg Germany The congress was hosted by the Society of Didactics of
 Mathematics Gesellschaft f r Didaktik der Mathematik GDM and took place under the auspices of the International
 Commission on Mathematical Instruction ICMI ICME 13 the biggest ICME so far brought together about 3500 mathematics
 educators from 105 countries additionally 250 teachers from German speaking countries met for specific activities The

scholars came together to share their work on the improvement of mathematics education at all educational levels. The papers present the work of prominent mathematics educators from all over the globe and give insight into the current discussion in mathematics education. The Invited Lectures cover a wide spectrum of topics, themes, and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education. This book is of particular interest to researchers, teachers, and curriculum developers in mathematics education.

Grade 6 Math Test - Teacher Guide, *Approximate Number System and Mathematics* Jingguang Li, Xinlin Zhou, Marcus Lindskog, 2019-11-25. Humans process quantity information without the aid of language or symbols to guide a variety of everyday life decisions. The cognitive system that supports this intuitive skill is often referred to as the approximate number system (ANS). It has been argued that the ANS serves as the foundation of the formal symbolic number system in mathematics. Abundant empirical evidence is supportive of this view: acuity of the ANS is positively correlated with symbolic math performance; training of the ANS may cause improvements in symbolic math performance; and the ANS and symbolic number processing may share a common neural underpinning. However, recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing. This e-book aims to advance our understanding of the underlying mechanisms of the overlap between the ANS and mathematics.

Continuous Issues in Numerical Cognition Avishai Henik, 2016-05-18. Continuous Issues in Numerical Cognition: How Many or How Much? re-examines the widely accepted view that there exists a core numerical system within human beings and an innate ability to perceive and count discrete quantities. This core knowledge involves the brain's intraparietal sulcus, and a deficiency in this region has traditionally been thought to be the basis for arithmetic disability. However, new research findings suggest this wide

agreement needs to be examined carefully and that perception of sizes and other non countable amounts may be the true precursors of numerical ability This cutting edge book examines the possibility that perception and evaluation of non countable dimensions may be involved in the development of numerical cognition Discussions of the above and related issues are important for the achievement of a comprehensive understanding of numerical cognition its brain basis development breakdown in brain injured individuals and failures to master mathematical skills Serves as an innovative reference on the emerging field of numerical cognition and the branches that converge on this diverse topic Features chapters from leading researchers in the field Includes an overview of the multiple disciplines that comprise numerical cognition and discusses the measures that can be used in analysis Introduces novel ideas that connect non countable continuous variables to numerical cognition

Visualisation and Epistemological Access to Mathematics Education in Southern Africa Marc Schäfer,2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well resourced and under resourced schools in Southern Africa Drawing on classroom research conducted in the Southern African region it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research based solutions and recommendations The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers academics and post graduate students of mathematics education comparative education and social justice education
