

## NUMERICAL METHODS - II

### Solution of Algebraic and Transcendental Equations

#### **Preliminaries:**

A problem of great importance in science and engineering is that of determining the roots/zeros of an equation of the form  $f(x) = 0$ .

A polynomial equation of the form

$$f(x) = a_0 x^n + a_1 x^{n-1} + a_2 x^{n-2} + \dots + a_{n-1} x + a_n = 0$$

is called an **algebraic equation**. An equation which contains polynomials, exponential functions, trigonometric functions and logarithmic functions etc. is called transcendental equation.

#### **Initial approximation for an iterative procedure:**

We use the following theorem of calculus to determine an initial approximation. It is also called intermediate value theorem.

**Theorem :** If  $f(x)$  is continuous on some interval  $[a, b]$  and  $f(a) f(b) < 0$ , then the equation  $f(x) = 0$  has at least one real root or an odd number of real roots in the interval  $(a, b)$ .

### BISECTION METHOD

For definiteness, let  $f(a)$  be negative and  $f(b)$  be positive. Then the root lies between  $a$  and  $b$  and let its approximate value be given by

$x_0 = \frac{a+b}{2}$ . If  $f(x_0) = 0$ , we conclude that  $x_0$  is a root of the equation  $f(x) = 0$ . Otherwise the root lies between  $x_0$  and  $b$  or between  $x_0$  and  $a$  depending on whether  $f(x_0)$  is positive or negative. We designate this new interval as  $[a_1, b_1]$  whose length is  $\frac{|b-a|}{2}$ , as

**History of Nordic Computing** Janis Bubenko,John Impagliazzo,Arne Soelberg,2005-01-14

Computing in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform mathematical calculations and assist mathematicians and engineers in scientific problem solving The early computers of the Nordic countries emerged during the 1950s and had names like BARK BESK DASK SMIL SARA ESKO and NUSSE Each of them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified professionals However one should not forget the punched card machine technology at this time that had existed for several decades In addition we have a Nordic name namely Frederik Rosing Bull contributing to the fundamentals of punched card technology and forming the French company Bull Commercial products such as FACIT EDB and SAAB D20 series computers in Sweden the Danish GIER computer the Nokia MIKKO computer in Finland as well as the computers of Norsk Data in Norway followed the early computers In many cases however companies and institutions did not further develop or exploit

Nordic computing hardware even though it exhibited technical advantages Consequently in the 1970s US computers primarily from IBM flooded the Nordic market College of Engineering University of Michigan. small capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult The HiNC2 conference attempted to help in this endeavor      **The Moore Method** Charles Arthur Coppin, W.
