Self-Care Science, Nursing Theory and Evidence-Based Practice Katherine Renpenning, Susan Gebhardt Taylor, 2011-05-20 This is an excellent review of the development of self care deficit theory and the use of self care in nursing practice. Explanations of the various theories and theory terms are well done and written at a level that novice theorists can relate to. The authors demonstrate how self care science can be fiscally and effectively applied to the care of patients/clients. Doody's Medical Reviews Dorothea Orem's Self Care Theory has been used as a foundation for nursing practice in healthcare institutions and as the basis of curricula in nursing schools for decades. This book explores the high level theory of the application of Orem's Self Care Theory and how it can improve patient outcomes as well as the cost effectiveness of nursing care delivery. Written for nursing theorists, researchers, administrators and graduate students, the text addresses the relationship of self care theory and evidence based care in nursing and provides a solution to improving contemporary healthcare outcomes. The book is divided into three sections. Section one discusses the reason for the existence of the nursing profession and identifies the performance of self care. Section two covers three nursing practice sciences: wholly compensatory nursing, partly compensatory nursing and supportive/educative nursing. Section three offers suggestions on how health care organizations can incorporate this broadened perspective of what constitutes evidence based practice and on going research methodology into every day delivery of nursing services. Key Features: Includes case examples to illustrate the application of theory to nursing practice. Provides a current, cost effective resource for implementing Orem's Self Care Deficit Theory for effective evidence based practice. Builds the link between the application of Orem's Self Care Theory and improved patient and fiscal healthcare outcomes.

Connections Anne Young (RN.), Susan G. Taylor, Kathie McLaughlin Renpenning, 2001 This new text brilliantly discusses theory and research, the importance of the connection between the two and the interlinking cyclical connection between clinical practice, research and theory. Core chapters review major nursing theories, research tools related to each theory, review of research conducted to support or advance each theory and ideas for continued research. Finally, the text includes select reliable and valid nursing theory research tools to be used.

for research More than just a theory and research text this valuable resource helps students in the research process make the connection between a real world clinical question nursing theory appropriate research tools and actual research Approach of linking theory to research and both to clinical nursing practice is of substantial importance to further growth and development of the scientific basis of nursing and to improved nursing care Summarization of key nursing theories and status report of each theory in its developmental process provides foundation for connecting the theories to applicable research Discussion of historic and current research related to these theories and of research approaches for each stated theory offers perspective on the growth of each theory and its usefulness to clinical practice Presentation of valid and reliable research tools for each stated theory reinforces the application of theory based research to clinical practice education and administration Chapter pedagogy of learning objectives key terms and bulleted summary points highlights and reinforces the key concepts of each chapter
