**Nutrient Delivery** Alexandru Grumezescu,2016-08-12 Nutrient Delivery Nanotechnology in the Agri Food Industry Volume Five discusses the fabrication merits demerits applications and bioavailability enhancement mechanisms of various nanodelivery systems Recent developments in various nanodelivery systems are also highlighted Volume 5 contains twenty chapters prepared by outstanding international researchers from Argentina Brazil Canada China Croatia India Iran Ireland M xico Pakistan Portugal Serbia Sri Lanka and the United States In recent years the delivery of micronutrients at nanoscale has been widely studied as these systems have the potential to improve bioavailability enable controlled release and enhance stability of food bioactives to a greater extent The nanodelivery systems typically consist of the food bioactive compound encapsulated and stabilized in food grade ingredients such as lipids

proteins or polysaccharides with diameters ranging from 10 nm to 1000 nm Among these the lipid based delivery systems such as nanoemulsions solid lipid nanoparticles nanoliposomes and micelles are widely studied for the delivery of lipophilic bioactive compounds These delivery vehicles improve the solubility permeability stability and bioavailability of the lipophilic compounds thereby enhancing their potential for oral delivery and functional food development On the other hand the hydrophilic bioactives are delivered through protein polysaccharide or biopolymer based colloidal nanosystems such as hydrogels nanogels and polymer nanoparticles The major concern other than solubility is the intestinal permeability of the micronutrients For instance the delivery system for compounds with poor intestinal permeability and low solubility need to be carefully designed using suitable lipids and surfactants Offers updated material for undergraduate and postgraduate students in food science biotechnology and related engineering fields Provides a valuable resource of recent scientific progress along with most known applications of nanomaterials in the food industry for researchers engineers and academics Includes novel opportunities and ideas for developing or improving technologies in the food industry

*Food Quality and Consumer Value* Monika J.A. Schröder,2013-03-09 Consumer markets for foods and beverages in developed countries are well supplied and highly fragmented Yet the question being asked is how close retailers actually come to fulfilling their customers requirements The concept of consumer value is one of the main pillars underpinning the theory of market differentiation This book takes an interdisciplinary approach to the analysis of satisfaction in relation to the consumption of food with both food science and consumer science playing central parts It approaches food quality from both the technical and the consumer satisfaction perspectives and assesses the roles of management and regulatory tools in delivering food quality for all Each area is discussed in detail using the appropriate technical terminology but keeping the text accessible to readers from both academic traditions as well as to non specialist readers

Nutritional Evaluation of Food Processing Endel Karmas,Robert S. Harris,2012-12-06 Dramatic changes in the attitudes toward human nutrition have taken place during the past decade Food related and medical professionals as well as consumers are now more than ever before aware of and concerned about diet nutrition and the beneficial and deleterious effects of food

processing upon nutrients The old saying We are what we eat is still relevant Nutritious food will contribute greatly to consumers good health and ultimately reduce medical bills Food processing is essential to maintaining our food reserves from one harvest to another thus letting us serve our daily meals regularly If food processing is defined as including all treatments of foodstuffs from harvest to consumption then more than 95% of our food may be considered as processed In most cases food processing and storage cause some reduction in the nutritional value of foods Advances in food science and food technology have resulted in an increase in nutrient retention after processing In addition today's consumer better understands how to avoid excessive nutrient losses during food preparation The information presented in this completely revised reference and textbook will help the reader to understand better the relationship between food processing and nutrient retention The authors scholarly contributions are greatly appreciated Cumulative Index to the Catalog of the Food and Nutrition Information and Education Material Center 1973-1975 National Agricultural Library (U.S.),1975

Berry Ottaway, 2012-12-06 The last few years have seen a growing consumer awareness of nutrition and healthy eating in general As a consequence the food industry has become more concerned with the nutritional value of products and the maintenance of guaranteed micronutrient levels While the food industry has the responsibility of producing foods that provide a realistic supply of nutrients including vitamins it is now also required to offer produce with a high degree of convenience and a long shelf life Vitamins are relatively unstable being affected by factors such as heat light and other food components but also by

the processes needed to preserve the goods or to convert them into consumer products such as pasteurization sterilization extrusion and irradiation The result of these interactions may be a partial or total degradation of the vitamins Food technology is concerned with both the maintenance of vitamin levels in foods and the restoration of the vitamin content to foods where losses have occurred In addition foods designed for special nutritional purposes such as infant food and slimming goods need to be enriched or fortified with vitamins and other micronutrients This book reviews vitamins as ingredients of industrially manufactured food products The technology of their production and use is covered from the food technologists and engineers points of view Detailed coverage is also provided of other technical aspects such as analysis stability and the use of vitamins as food technological aids
