Department of Health and Human Services U.S. Department of Agriculture, 2016-01-11 Every 5 years since 1980 a new edition of the Dietary Guidelines for Americans has been published Its goal is to make recommendations about the components of a healthy and nutritionally adequate diet to help promote health and prevent chronic disease for current and future generations Although many of its recommendations have remained relatively consistent over time the Dietary Guidelines has evolved as scientific knowledge has grown These advancements have provided a greater understanding of and focus on the importance of healthy eating patterns as a whole and how foods and beverages act synergistically to affect health The Dietary Guidelines is designed for professionals to help all individuals ages 2 years and older and their families consume a healthy nutritionally adequate diet The information in the Dietary Guidelines is used in developing Federal food nutrition and health policies and programs It also is the basis for Federal nutrition education materials designed for the public and for the nutrition education components of HHS and USDA food programs It is developed for use by policymakers and nutrition and health professionals Additional audiences who may use Dietary Guidelines information to develop programs policies and communication for the general public include businesses schools community groups media the food industry and State and local governments Previous editions of the Dietary Guidelines focused primarily on individual dietary components such as food groups and nutrients However people do not eat food groups and nutrients in isolation but rather in combination and the totality of the diet forms an overall eating pattern The components of the eating pattern can have interactive and potentially cumulative effects on health These patterns can be tailored to an individual's personal preferences enabling Americans to choose the diet that is right for them A growing body of research has examined the relationship between overall eating patterns health and risk of chronic disease and findings on these relationships are sufficiently well established to support dietary guidance As a result eating patterns and their food and nutrient characteristics are a focus of the recommendations in the 2015 2020 Dietary Guidelines
