Graduate Study and Research in Agriculture SEARCA and the Asian Farmers Association for Sustainable Rural Development AFA from 8-9 December 2021. The consultation was organized in collaboration with United Nations Educational Scientific and Cultural Organization UNESCO International Cooperation Centre of Agricultural Research for Development CIRAD Group For Research and Technology Exchanges GRET and with technical assistance from FAO Regional Office for Asia and the Pacific RAP. It was attended by 157 international participants and 51 speakers coming from different academic and research institutions, ARIs, non-governmental organizations, NGOs, and civil society organizations, CSOs, government agencies, and development partners. The regional consultation highlighted the importance of collaboration among ARIs, family farmers, organizations, government agencies, and development partners in Asia in enhancing the livelihoods of family farmers and developing their capacities to cope with the COVID-19 pandemic through agroecology. This publication compiles the proceedings of the two-day virtual regional consultation and marks an important milestone in initiating a stocktaking of existing initiatives and collaborations between ARIs, inter-government agencies, and family farmers organizations in the region with a specific focus on agroecology and sustainable food systems.

Scientific and Engineering Research Facilities, 2001. *Forest Products Research and Development Organizations in a Worldwide Setting*, 2007. Located in 23 countries, 40 forest products research and development organizations outside the United States were reviewed in 2004 and 2005. The intent was to obtain a better understanding of how such organizations are structured and administered and their performance judged. Investing over 600 million annually, the 40 organizations employed 7,000 to 7,500 scientists and supporting staff. Especially noteworthy about the organizations are the many ways in which they identify themselves such as institutes, laboratories, centers, their long history of sustained involvement in forest products research, and their movement from public to private ownership, whole or in part. The distinction between public and private sector responsibility for research is blurry with these organizations as often they have public sponsorship yet private operation and management. They offer a wide range of services to clients yet have complex ownership and partnering arrangements. Their organizational structures are seemingly scrambled with forest product research subunits located within larger parent organizations with broad multisector research responsibilities and specialized services to a single major group of clients. These organizations have an intense desire to meet the needs of clients and feature the following synthesis of existing information as an important service fees charged for services provided, strategic interest in clients located throughout the world, educational and degree granting activities, multiple sources of income and revenue, diverse standards for measuring performance, adept response to broad economic social changes, multiple location of physical facilities, and differing degrees of publicly available information describing mission and operation of organizations. *Public Research Institutions Mapping Sector Trends* OECD, 2011-09-02. This publication provides new information on public research institutions, PRIs, and government strategies showing how they have evolved.
