Compounds of Germanium, Tin, and Lead, including Biological Activity and Commercial Application Richard W. Weiss, 2013-06-29 The aim of this compilation has been to provide a comprehensive non critical source of information concerning organometallic compounds The scope is limited to the compounds containing at least one carbon metal bond The information includes methods of preparation properties chemical reactions and applications The First Edition comprised the literature from 1937 to 1958 The Second Edition is completely revised and extended through 1964 The literature prior to 1937 was thoroughly covered by E Krause and A von Grosse in Die Chemie der metall organischen Verbindungen Verlag von Gebrueder Borntraeger Berlin 1937 Our work consists of three volumes Volume I contains derivatives of the transition metals of Groups III through VIII of the Periodic Table Volume II contains derivatives of germanium tin and lead Volume III contains derivatives of arsenic antimony and bismuth The compilation is based on searches through Chemical Abstracts The collection of references for 1964 was completed before the Subject Indexes to Volumes 60 and 61 of the Abstracts were available thus some omissions in the coverage of that year are possible We have attempted to make the coverage of the literature complete in order that the compilation may have best utility to the chemist chemical engineer patent attorney and editor In the interest of brevity certain numerical data are omitted but references to the original literature are given Yield data are rounded to two significant figures Wherever possible tables have been used The entries in the Bibliography section include references to Chemical Abstracts      **Organometallic Compounds** Michael Dub, 1961      **GeR<sub>4</sub> Compounds and Ge(CH<sub>3</sub>)<sub>3</sub>R**

**Compounds up to Cyclic Alkyl Groups** Frank Glockling, 2013-06-29 The present volume opens the Gmelin series on organogermanium compounds that is those compounds containing at least one germanium to carbon bond This whole series is being coordinated by Professor J Satge of the Universite Paul Sabatier in Toulouse Germanium is of historical interest because its existence was predicted by Newlands in 1864 and by Mendeleeff in 1871 although it was not isolated until 1887 by Winkler Mendeleeff's predictions of the properties of germanium and its compounds by comparison with what was known of the chemistry of its neighbors silicon and tin proved remarkably accurate and included predictions of the existence of organic derivatives GeR and of their properties 4 Although significant applications are as yet lacking for organogermanium compounds in contrast to organo silicon tin and lead compounds there has been considerable interest in the parallel

development of its chemistry Up to 1983 about 1500 publications have appeared on organogermanium chemistry The material of the present series will be grouped in a similar way as for the organotin series beginning with compounds containing only one germanium atom mononuclear compounds and continuing with binuclear up to polynuclear compounds Within each group the compounds are arranged by the kind of non carbon substituents rather than by following the usual Gmelin principle of the last position using the Gmelin system of elements Organometallic Compounds Literature Survey 1937-1958 Michael Dub,2013-12-11 **The Chemistry of Organic Germanium, Tin and Lead Compounds** Saul Patai,Zvi Rappoport,1995-11-06 This is the first book to deal with C Ge C Sn and C Pb bonds as functional groups This concept helps to better understand the chemistry of these compounds which find an increasing amount of applications The volume concentrates on analytical aspects and on safety and toxicology in the environment This volume is now available in electronic format from BooksOnline **Organometallic Chemistry** E W Abel,F G A Stone,2007-10-31 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *Pb Organolead Compounds* Friedo Huber,2013-06-29 This volume is exclusively devoted to tetramethyllead Owing to the recent large scale use as an antiknock agent its application toxicological biological and environmental aspects are given much attention besides its chemical and physical properties Literature coverage up to 1986 NBS Technical Note ,1970 **Organometallic Compounds of Low-Coordinate Si, Ge, Sn and Pb** Vladimir Ya. Lee,Akira Sekiguchi,2011-07-22 Until recently the low coordinate

compounds of the heavier elements of group 14 were known only as transient unstable species which were difficult to isolate. However, recent developments have led to the stabilisation of these compounds, and today heavier group 14 element cations, radicals, anions, carbene analogues, alkene and alkyne analogues, and aromatics have all been prepared as highly reactive, stable, fully characterizable, and readily available organometallic reagents.

**Organometallic Compounds of Low Coordinate Si, Ge, Sn, and Pb** describes the chemistry of this exciting new class of organometallics with an emphasis on their major similarities and differences with the analogous species in organic chemistry. Topics covered include the synthesis, structure, reactions, and synthetic applications of Si, Ge, Sn, and Pb centered cations, radicals, and anions; heavy analogues of carbenes, silylenes, germylenes, stannyls, and plumbyls; heavy analogues of alkenes, disilenes, digermenes, distannenes, diplumbenes; heavy analogues of alkynes, disilynes, digermynes, distannynes, diplumbynes, and their valence isomers; heteronuclear derivatives, silenes, germenes, stannenes, silagermenes, silastannenes, germastannenes; heavy analogues of alkenes of the type  $E_1E_2E_3E_4$  where  $E_1, E_2, E_3$  and  $E_4$  are elements of the groups 13, 14, 15, and 16; cyclic compounds, three, four, five, and six membered rings; heavy analogues of 1,3-dienes, allenes, and other cumulenes; heavy analogues of aromatic compounds, including a comparison between organometallic and organic aromaticity.

**Organometallic Compounds of Low Coordinate Si, Ge, Sn, and Pb** is an essential guide to this emerging class of organometallic reagents for researchers and students in main group organometallic, synthetic, and silicon chemistry.
