Cavitt, 2006-06-23 A child sighted or blind is born into this world with all the building blocks for what they can become This physical material is impacted by the child's environment over a life time while the self evolves The self is the same in blind children as it is in the sighted only the developmental process is different Both children have the same starting materials mind body and spirit With these parts the child develops a process of thinking feeling and behaving toward other people objects and situations and they recognize that others also think feel and behave in their environment It is with their thoughts emotions and actions that children relate to their world using physical emotional cognitive social and moralistic attributes and through this interrelationship the self evolves The self is everything that exists in a person's unique world and it exists because of their self concept and self esteem Aspects of self concept are the elements of well being that assist our survival in our environment They consist of all the physical things our personality feelings toward life our knowledge and problem solving techniques how

we successfully interface with others and our social and spiritual values in life If our self concept contains the important things and issues in life and there is a high regard for them then our self will evolve in a manner conducive to peace and harmony If not the opposite will occur The blind child must build a self with a missing part Granted self will evolve for a blind child but it must be augmented by all other senses of the body in order to enhance the mind and spirit A blind child's thoughts feelings and behaviors serve the same purpose as they do for a sighted child but will evolve differently The physical emotional cognitive social and moral concepts are necessary but are obtained without the benefit of the automatic process of seeing The self evolves but the conduit for inputting their environment is different for a blind child This is the story of a four year blind boy named Cavitt and how his self is evolving His adventures can be used to assist other blind children develop their self The book vividly illustrates psychology of a blind child as he lives this psychology It is the development of a self that is Cavitt *Hand in Hand* Kathleen Mary Huebner,1995 This series was designed to develop resources for educators of children who are visually impaired hearing impaired and severely disabled The Hand In Hand materials emphasize the communication and mobility skills crucial to independence and provide important information to help service providers do their jobs effectively Containing contributions from more than 30 nationally recognized experts in the field of deaf blindness this groundbreaking information consists of four components that can be used separately or together A two volume self study text that explains how deaf blind students learn focusing on essential communication and mobility skills Designed to provide comprehensive information in an easy to read way this invaluable resource includes identified key concepts self study questions and answers and references The user friendly format includes concise Help at a Glance and From Theory to Practice sections throughout Sidebars figures tables graphs and photos offer additional perspectives and information
