Origin and Evolution of the Elements: Volume 4, Carnegie Observatories Astrophysics Series Andrew McWilliam, Michael Rauch, 2004-09-23 This Carnegie volume discusses the origin and evolution of elements in our galaxy and others

*Coevolution of Black Holes and Galaxies: Volume 1, Carnegie Observatories Astrophysics Series* Luis C. Ho, 2004-09-09 This book was originally published in 2004 Black holes are among the most mysterious objects in the Universe Weighing up to several billion Suns massive black holes have long been suspected to be the central powerhouses of energetic phenomena such as quasars Advances in astronomy have not only provided spectacular proof of this long standing paradigm but have revealed the unexpected result that far from being rare exotic beasts they inhabit the center of virtually all large galaxies Candidate black holes have been identified in increasingly large numbers of galaxies both inactive and active to the point where statistical studies are possible Fresh work has highlighted the close connection between the formation growth and evolution of supermassive black holes and their host galaxies This volume contains the invited lectures from an international symposium that was held to explore this exciting theme and is a valuable review for professional astronomers and graduate students

Block, 2013-04-17 THE EDITORS DAVID L BLOCK AND KENNETH C FREEMAN SOC CO CHAIRS IVANIO PUERARI ROBERT GROESS AND LIZ K BLOCK 1 Harvard College Observatory 1958 The past century has truly brought about an explosive period of growth and discovery for the physical sciences as a whole and for astronomy in particular Galaxy morphology has reached a renaissance The year 1958 The date October 1 The venue Harvard College Observatory The lecturer Walter Baade

With amazing foresight Baade penned these words Young stars supergiants and so on make a terrific splash lots of light The total mass of these can be very small compared to the total mass of the system Dr Layzer then asked the key question the discussion raises the point of what this classification would look like if you were to ignore completely all the Population I and just focus attention on the Population II We stand on the shoulders of giants The great observer E E Barnard in his pioneering efforts to photograph the Milky Way devoted the major part of his life to identifying and numbering dusty holes and dust lanes in our Milky Way No one could have dreamt that the pervasiveness of these cosmic dust masks not only in our Galaxy but also in galaxies at high redshift is so great that their penetration is truly one of the pioneering challenges from both space borne telescopes and from the ground

**Nuclear Physics of Stars** Christian Iliadis, 2008-07-11 Thermonuclear reactions in stars is a major topic in the field of nuclear astrophysics and deals with the topics of how precisely stars generate their energy through nuclear reactions and how these nuclear reactions create the elements the stars planets and ultimately we humans consist of The present book treats these topics in detail It also presents the nuclear reaction and structure theory thermonuclear reaction rate formalism and stellar nucleosynthesis The topics are discussed in a coherent way enabling the reader to grasp their interconnections intuitively The book serves both as a textbook with many examples and end of chapter exercises but also as a reference book for use by researchers working in the field of nuclear astrophysics
