We are the Martians Giovanni F Bignami, 2012-06-06 For many thousands of years human beings have been asking themselves whether they are more frightened of being alone in the universe or of the thought that there is someone

else out there Over the past few decades however we have moved from imagination to action exploring the cosmos using new techniques often with surprising results Numerous fascinating but little known facts have emerged for example that every year many rocks from Mars fall on the Earth that one of our amino acids has been found in the coma of a comet and that some of the known thousands of extrasolar planets are similar to our own There are further exciting and important discoveries around the corner that will cast more light on the great enigma of how life started on Earth In this intriguing book one of the World's leading researchers in astrophysics and space science examines fundamental questions concerning life on Earth and the rest of the cosmos in an accessible and stimulating way The Equation that Couldn't Be Solved Mario Livio, 2005-09-19 What do Bach's compositions Rubik's Cube the way we choose our mates and the physics of subatomic particles have in common All are governed by the laws of symmetry which elegantly unify scientific and artistic principles Yet the mathematical language of symmetry known as group theory did not emerge from the study of symmetry at all but from an equation that couldn't be solved For thousands of years mathematicians solved progressively more difficult algebraic equations until they encountered the quintic equation which resisted solution for three centuries Working independently two great prodigies ultimately proved that the quintic cannot be solved by a simple formula These geniuses a Norwegian named Niels Henrik Abel and a romantic Frenchman named variste Galois both died tragically young Their incredible labor however produced the origins of group theory The first extensive popular account of the mathematics of symmetry and order The Equation That Couldn't Be Solved is told not through abstract formulas but in a beautifully written and dramatic account of the lives and work of some of the greatest and most intriguing mathematicians in history **The Story of Science: Einstein Adds a New Dimension** Joy Hakim, 2016-04-26 In volume three students will look over Albert Einstein's shoulder as he and his colleagues develop a new kind of physics It leads in two directions to knowledge of the vast universe and its future insights build on Einstein's theories of relativity and to an understanding of the astonishingly small subatomic world the realm of quantum physics Students will learn why relativity and quantum theory revolutionized our world and led to the most important ideas in modern science maybe of all time In the three book The Story of Science series master storyteller Joy Hakim narrates the evolution of scientific thought from ancient times to the present With lively character driven narrative Hakim spotlights the achievements of some of the world's greatest scientists and encourages a similiar spirit of inquiry in readers The books include hundreds of color photographs charts maps and diagrams informative sidebars suggestions for further reading and excerpts from the writings of great scientists *Evil Rises in North Korea: The Hunt for Chosin's Lost Treasure* Michael W Sunner, 2017-11-27 EVIL RISES IN NORTH KOREA The Hunt for Chosin's Lost Treasure begins with the North's invasion of South Korea on June 25th 1950 which initiated the Korean War The war resulted in the lasting enmity and mutual distrust between North and South Korea up to the present day Kim Jon uns rogue state represents a harsh reality for the Western world This book uses the historic framework of the Korean War to launch a fictional tale of a vast treasure lost
