Orthopaedic Trauma Surgery Peifu Tang, Hua Chen, 2023-04-29 This book adopts the principle of guiding surgery by anatomy fixation by biomechanics and clinical procedures by functional recovery In each chapter the applied anatomy of the fracture site is first introduced which confers prominence to the relationship between the anatomical structure and surgery and emphasizes the structure that must be protected and repaired during surgery In addition the biomechanical characteristics of the fracture site are described so that the appropriate fixation method can be selected according to the characteristics of the mechanical environment In most chapters on periarticular fractures the book also describes in detail how the joints fulfil their function which is often the core of clinical decision making with the hope that the reader can understand the how and the why This book adopts the outline style format instead of the traditional paragraph by paragraph discussion to supply readers with the extracted essence in a more succinct manner which improves the logical flow and concision and thereby improves the readability of the book In addition using more than 3 000 illustrations and photos in 3 volumes many of which were obtained from our clinical practice the book discusses injury mechanisms and the classification and assessment of extremity and axial skeleton fractures with a focus on typical and new surgical methods developed in recent years These illustrations and photos provide the reader with a good reference for learning surgical techniques and skills This second volume is focusing on lower extremity fractures in 12 chapters

Orthopaedic Decision Making Clinical Decision Making Series By Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has become much more apparent than ever. Its capability to stir emotions, provoke thought, and instigate transformation is really remarkable.
