Decrypting Power Ricardo Sanín-Restrepo, 2020-05-19 Decrypting Power aims to reach a unifying concept that allows the connection of the fundamental theses stemming from critical legal studies, Subaltern studies, decolonization law, and society, global political economy, critical geopolitics, and theories of decoloniality. This volume proposes that this concept is the encryption of power, a category of analysis that reveals the weakness of political liberalism when it takes the place of the legitimate fundament of democracy as well as its consummate capacity to conceal new mechanisms of global power. The theory of encryption of power understands that there is only a world where difference exists as the fundamental and sole order, but also that such a possibility is heavily obstructed by the concentration of power in forms of oppression. The world hangs on the thread of this entangled reality made up of difference and its denial of democracy and its simulations of truth and its codifications. The decryption of power is then, above all, a theory of justice essential to radical democracy, which comes fully equipped to prevail over the conditions that deny the possibility of an egalitarian world.

Wind Systems in the Dead Sea and Footprints in Seismic Records Lott, Friederike Franziska, 2017-02-22 Atmospheric processes such as wind impact the ground motion of the earth and have the potential to induce strong broad-band noise in seismological records. In order to quantify the influence of wind on ground motion velocity, joint seismological and meteorological measurements were conducted at the Dead Sea. Results reveal a pronounced impact of wind on seismological records. A methodology is presented to account for the dependency of PSD of ground motion velocity on the horizontal wind field.
