Broadband Powerline Communications Halid Hrasnica, Abdelfatteh Haidine, Ralf Lehnert, 2005-01-14 Broadband Powerline Communications Network Design covers the applications of broadband PLC systems in low voltage supply networks a promising candidate for the realization of cost effective solutions for last mile communications networks There are many activities surrounding the development and application of PLC technology in the access area particularly because of strong interest of new network providers after the deregulation of telecommunications market Nowadays there are no existing standards for broadband PLC networks which use a frequency range up to 30 MHz This book includes relevant and timely information regarding broadband PLC systems and especially PLC access networks and contributions to the design aspects of broadband PLC access systems and their network components This book Offers explanations on how broadband PLC networks are realized what the important characteristics for the transmission on electrical power grids are and which implementation solutions have been recently considered for the realization of broadband PLC systems Considers various system realizations disturbance scenarios and their impact the transmission in PLC networks electro magnetic compatibility applied modulation schemes coding and error handling methods Pays particular attention to the specifics of the PLC MAC layer and its protocols as well as the modelling and performance evaluation of broadband PLC networks Power Line Communications Lutz Lampe, Andrea M. Tonello, Theo G. Swart, 2016-06-13 This second edition of Power Line Communications will show some adjustments in content including new material on PLC for home and industry PLC for multimedia PLC for smart grid and PLC for vehicles Additional chapters include coverage of Channel Characterization Electromagnetic Compatibility Coupling and Digital Transmission Techniques This book will provide the reader with a wide coverage of the major developments within the field With contributions from some of the most active researchers on PLC the book brings together a wealth of international experts on specific PLC topics Broadband Power-line Communications Systems Justinian Anatory, Nelson Theethayi, 2010 This book covers topics that include classification of BPLC systems models for analyses based on TL theory estimation of channel capacity and performance and finally application of modulation coding and media access control techniques for boosting the performance of BPLC systems It will be of interest to graduates and practicing engineers *Home Networking Technologies and Standards* Theodore B. Zahariadis, 2003 Here is a thorough treatment of distortion in RF power amplifiers This unique resource offers expert guidance in designing easily linearizable systems that have low memory effects It offers you a detailed understanding of how the matching impedances of a power amplifier and other RF circuits can be tuned to minimize overall distortion What s more you see how to build models that can be used for distortion simulations A new measurement methodology enables you to gauge the amplitude and phase of distortion components and recognize memory effects The book explains that by killing memory effects it is possible to use simple linearizers such as analog predistortion and still achieve sufficient performance You learn a distortion analysis technique that allows you to repeat the analysis with other amplifier structures Including over 120 equations and more than

110 illustrations this practical reference provides you with the assistance you need to create amplifiers suitable for linear transmitters and offers you new views of semiconductor modeling

Powerline Communications Systems

Nishant Sagar, 2011 The electric power distribution grid is a medium over which fast and reliable communication services can be provided Power Line Communications PLC systems provide an alternative to wireless communications in the transmission of data within buildings and vehicles In recent years increased interest in PLC systems for both commercial and residence applications has resulted in the development of standards for use of the electric power grid as a communications channel conveying messages in addition to power The types of applications range from simple inexpensive services centered around networked household appliances where data rates are on the order of kilobits per second to Internet access via the electrical outlet wall socket where data rates are on the order of megabits per second Currently PLC systems can accommodate high speed networking that includes broadband Internet access voice over IP and the interconnectivity of home entertainment devices The development of a Power Line Communications system presents a significant challenge for the communications engineer due to the unusual channel characteristics that affect high speed signal transmission The electric power grid is designed for and operated at 50 60 Hz throughout the world

Furthermore the topology of a local electric power grid network is often very irregular resulting in significant dispersion of the transmitted message signals This thesis presents an overview of the major features and characteristics of PLC systems the fundamental properties of powerline channels and an analysis of PLC system performance in the presence of realistic powerline channel conditions The development of a powerline communication system requires detailed knowledge of the electric power grid channel properties such as the frequency transfer function and the interference processes in order to choose a suitable transmission method The noise interference and channel multipath effects are the main impairments to the performance of PLC systems This thesis presents appropriate channel models for use in the design of PLC systems In particular the Bit Error Rate BER performance of a single carrier Binary Phase Shift Keying BPSK system operating over a multipath channel is analyzed and compared with the performance obtained with a multi carrier data transmission scheme
