Jones, 2008-04-11 The Meaning of Video Games takes a textual studies approach to an increasingly important form of expression in today s culture It begins by assuming that video games are meaningful not just as sociological or economic or cultural evidence but in their own right as cultural expressions worthy of scholarly attention In this way this book makes a contribution to the study of video games but it also aims to enrich textual studies Early video game studies scholars were quick to point out that a game should never be reduced to merely its story or narrative content and they rightly insist on the importance of studying games as games But here Steven E Jones demonstrates that textual studies which grows historically out of ancient questions of textual recension multiple versions production reproduction and reception can fruitfully be applied to the study of video games Citing specific examples such as Myst and Lost Katamari Damacy Halo Fa ade Nintendo s Wii and Will Wright s Spore the book explores the ways in which textual studies concepts authorial intention textual variability and performance the paratext publishing history and the social text can shed light on video games as more than formal systems It treats video games as cultural forms of expression that are received as they are played out in the world where their meanings get made

Prospecting Ocean Stefanie Hessler, 2019-12-17 Investigating the entanglement of industry politics culture and economics at the frontier of ocean excavations through an innovative union of art and science. The oceans are crucial to the planet's well being. They help regulate the global carbon cycle support the resilience of ecosystems and provide livelihoods for communities. The oceans as guardians of planetary health are threatened by many forces including growing extractivist practices. Through the innovative lens of artistic research *Prospecting Ocean* investigates the entanglement of industry politics culture and economics at the frontier of ocean excavation. The result is a richly illustrated study that unites science and art to examine the ecological cultural philosophical and aesthetic reverberations of this current threat to the oceans. *Prospecting Oceans* takes as its starting point an exhibition by the photographer and filmmaker Armin Linke which was commissioned by TBA21 Academy London and first shown at the Institute of Marine Science CNR ISMAR in Venice. Linke is concerned with making the invisible visible and here he unmasks the technologies that enable extractions from the ocean including future seabed mining for minerals and sampling of genetic data. But the book extends far beyond Linke's research presenting the latest research from a variety of fields and employing art as the place where disciplines can converge. Integrating the work of artists with scientific theoretical and philosophical analysis *Prospecting Ocean* demonstrates that visual culture offers new and urgent perspectives on ecological crises.
