of a survey among 254 political scientists in the Federal Republic on what they considered to be the sine qua non basic concepts of the discipline. In various respects the data are remarkable.² On the one hand the enormous diversity of the answers corroborates statistically what has long been known from experience, i.e. the existence of an extremely wide variety of standpoints, perspectives and approaches within the discipline. An interesting case in point is the concept of power. Somewhat surprisingly power was not the most frequently mentioned term. But it did of course end up at the very top of the list in third place behind conflict and interest. What is noteworthy is that it gained this position by being named only 81 times, that is by less than a third of the respondents. This is no insignificant detail. Certainly to that minority of scholars whose conceptions of politics do include power as an indispensable basic concept, the approaches of the vast majority of their colleagues for whom, as their answers in the survey reveal, power does not play an eminent role must appear in an important sense mistaken or perhaps even incomprehensible.³
