

SISFFIT049 - Use exercise science principles in fitness instruction

Practical Assessment

Task 1 – Principles of Training (Written Report)

Define and explain, providing an example, of each of the key aspects (below) relevant to fitness instruction and identify how they can be used in the design and implementation of personalised exercise programs.

- adaptation
- overload
- specificity
- individualisation
- progression and regression
- reversibility

Task 2 – Program Design (Written Report)

Design four (4) client programs, recording the following details for each client:

- a profile of the client and how individual characteristics of age, sex, fitness levels and basic physical characteristics have been used to design the program
- how the program is systematically structured to provide progression towards planned goals and adaptations
- rationale for the selection of exercises that relate to the principle of specificity
- how the principle of overload has been used to determine the volume and intensity of exercises and frequency of sessions
- rationale for the types of recovery that are incorporated into sessions, and how sessions are sequenced to allow recovery from specific types of exercises between sessions.

Explain how exercise science principles are incorporated into the design of each of these programs

A Practical Guide to a Task-based Curriculum Icy LEE, Anne MA, May PANG, Elizabeth WALKER, Alice CHOW, Benjamin LI, 2008-05-01 This book aims to support and empower frontline ELT teachers in implementing a task based approach systematically without losing sight of the importance of grammar teaching within the framework of tasks Useful examples are provided to illustrate how grammar teaching can be conducted through meaningful tasks in authentic contexts The importance of viewing assessment as an integral part of the learning teaching and assessment cycle is also discussed with practical suggestions on developing assessment tasks and assessment criteria provided Published by City University of Hong Kong Press

Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching In the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations However these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations The contributions specify

these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training
