Time Series with Long Memory Peter M. Robinson, 2003 Long memory processes constitute a broad class of models for stationary and nonstationary time series data in economics finance and other fields Their key feature is persistence with high correlation between events that are remote in time A single memory parameter economically indexes this persistence as part of a rich parametric or nonparametric structure for the process Unit root processes can be covered along with processes that are stationary but with stronger persistence than autoregressive moving averages these latter being included in a broader class which describes both short memory and negative memory Long memory processes have in recent years attracted considerable interest from both theoretical and empirical researchers in time series and econometrics This book of readings collects articles on a variety of topics in long memory time series including modelling and statistical

inference for stationary processes stochastic volatility models nonstationary processes and regression and fractional cointegration models Some of the articles are highly theoretical others contain a mix of theory and methods and an effort has been made to include empirical applications of the main approaches covered A review article introduces the other articles but also attempts a broader survey traces the history of the subject and includes a bibliography

Time Series: Theory and Methods Peter J. Brockwell, Richard A. Davis, 1991 This paperback edition is a reprint of the 1991 edition Time Series Theory and Methods is a systematic account of linear time series models and their application to the modeling and prediction of data collected sequentially in time The aim is to provide specific techniques for handling data and at the same time to provide a thorough understanding of the mathematical basis for the techniques Both time and frequency domain methods are discussed but the book is written in such a way that either approach could be emphasized The book is intended to be a text for graduate students in statistics mathematics engineering and the natural or social sciences It contains substantial chapters on multivariate series and state space models including applications of the Kalman recursions to missing value problems and shorter accounts of special topics including long range dependence infinite variance processes and nonlinear models Most of the programs used in the book are available in the modeling package ITSM2000 the student version of which can be downloaded from <http://www.stat.colostate.edu/pjbrock/student06>
