Love Power And Knowledge Towards A Feminist Transformation Of The Sciences:

Love, Power and Knowledge Hilary Rose, 2013-07-03 In this book Hilary Rose develops new terms for thinking about science and feminism locating the feminist criticism of science as both integral to the feminist movement and to the radical science movement

Love Anna G. Jónasdóttir, Ann Ferguson, 2013-11-12 This unique timely book of original essays sets the stage for a new materialist feminist debate on the analysis ethics and politics of love The contributors raise questions about social power and domination situating their research in a materialist feminist perspective that investigates love historically in order to understand changing ideologies representations and practices The essays range from studies of particular representations and examples of love feminist translation mass media images and internet love blogs to feminist theories of love and marriage to ethical and political theories describing critiquing or advocating the use of love in groups as a radical force They break new ground in bringing together questions of gendered interests in love temporal dimensions of loving practices and the politics of love in radical transformations of society

Gendered Bodies and New Technologies Amanda du Preez, 2009-10-02 In this era of ubiquitous information flow heightened mobility and limitless consumer convenience human interaction with new technologies has become increasingly seamless In the process the human body is effectively and steadily reduced to just another interface or a second life so to speak What is easily forgotten during this translucent transaction is that being human also necessarily implies being embodied In other words to constitute a body in its non negotiable physicality is still what it entails to be human amongst other things To live daily in and through the complicated and dynamic intersection between mind and body psychology and physiology also known as embodiment is what makes us human

Frankenstein's Daughters Jane L. Donawerth, 1997-04-01 Women Science fiction authors past and present are united by the problems they face in attempting to write in this genre an overwhelmingly male dominated field Science fiction has been defined by male centered scientific discourse that describes women as alien others rather than rational beings This perspective has defined the boundaries of science fiction resulting in women writers being excluded as equal participants in the genre *Frankenstein's Daughters* explores the different strategies women have used to negotiate the minefields of their chosen career they have created a unique utopian science formulated by and for women with women characters taking center stage and actively confronting oppressors This type of depiction is a radical departure from the condition where women are relegated to marginal roles within the narratives Donawerth takes a comprehensive look at the field and explores the works of authors such as Mary Shelley Marion Zimmer Bradley Ursula K Le Guin and Anne McCaffrey

Hermeneutic Philosophies of Social Science Babette Babich, 2017-10-23 Hermeneutic philosophies of social science offer an approach to the philosophy of social science foregrounding the human subject and including attention to history as well as a methodological reflection on the notion of reflection including the intrusions of distortions and prejudice Hermeneutic philosophies of social science offer an explicit orientation to and concern with the subject of the human and social sciences

Hermeneutic philosophies of the social science represented in the present collection of essays draw inspiration from Gadamer's work as well as from Paul Ricoeur in addition to Michel de Certeau and Michel Foucault among others. Special attention is given to Wilhelm Dilthey in addition to the broader phenomenological traditions of Edmund Husserl and Martin Heidegger as well as the history of philosophy in Plato and Descartes. The volume is indispensable reading for students and scholars interested in epistemology, philosophy of science, social studies of knowledge as well as social studies of technology.

Investigating Cultures of Equality Dorota Golańska, Aleksandra M. Różalska, Suzanne Clisby, 2022-05-09 This volume explores the processes of investigating cultures of equality and sets out an epistemological framework for generating a more just and response-able knowledge. It offers a tapestry of inventive, self-reflexive, collective and situated praxis of conducting politically informed research. Such efforts contest or occasionally reinvent the social and cultural worlds that we currently inhabit in an attempt at building cultures of equality across different locations and contexts. The book engages with the idea of producing knowledge with others, indicating the political potential of scientific practice and offering a view of knowledge as a collective affective intellectual effort. It provides an inventory of creative engagements with concepts and methodologies enabling production of socially responsible knowledges. By critically exploring new possibilities of scientific inquiry, the contributors reflect on how knowledge can be generated to serve the political agenda of movements for equality and social justice. The chapters also elucidate different conceptualisations of and approaches to who the researcher is and how they interact with cultural and social worlds.

Ghost Stories for Darwin Banu Subramaniam, 2014-10-15 In a stimulating interchange between feminist studies and biology, Banu Subramaniam explores how her dissertation on flower color variation in morning glories launched her on an intellectual odyssey that engaged the feminist studies of sciences in the experimental practices of science by tracing the central and critical idea of variation in biology. Subramaniam reveals the histories of eugenics and genetics and their impact on the metaphorical understandings of difference and diversity that permeate common understandings of differences among people that exist in contexts that seem distant from the so-called objective hard sciences. Journeying into interdisciplinary areas that range from the social history of plants to speculative fiction, Subramaniam uncovers key relationships between the life sciences, women's studies, evolutionary and invasive biology and the history of ecology and how ideas of diversity and difference emerged and persist in each field.

Reconsidering Science Learning Eileen Scanlon, 2004 This informative book looks at science learning in a wide range of contexts. It is divided into three parts. Part one deals with the arguments put forward for studying science and includes a discussion on what science learners need to know about the nature of science and how decisions about what forms science curricula are made. Part two includes articles on the processes by which science is learned and part three deals with inclusivity and diversity in science learning and what widening participation means for science education. This is a companion book to *Mediating Science Learning through ICT*, also published by RoutledgeFalmer. *Reconsidering Science Learning* will be of

particular interest to teachers on masters courses in science education and academics with an interest in science education

For Better or For Worse? Collaborative Couples in the Sciences Annette Lykknes, Donald L. Opitz, Brigitte Van Tiggelen, 2012-06-05 In this volume a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced heterosexual and homosexual aristocratic and working class and politically right and left The contributors analyze cases shaped by their particular geographical locations ranging from retreat settings like the English countryside and Woods Hole Massachusetts to university laboratories and urban centers in Berlin Stockholm Geneva and London The volume demonstrates how the terms and meanings of collaboration variably shaped by disciplinary imperatives cultural mores and the agency of the collaborators themselves illuminate critical intellectual and institutional developments in the modern sciences

The New Brain Sciences Dai Rees, Steven Rose, 2004-10-21 The last 20 years have seen an explosion of research and development in the neurosciences Indeed some have called this first decade of the 21st century the decade of the mind An all encompassing term the neurosciences cover such fields as biology psychology neurology psychiatry and philosophy and include anatomy physiology molecular biology genetics and behaviour It is now a major industry with billions of dollars of funding invested from both public and private sectors Huge progress has been made in our understanding of the brain and its functions However with progress comes controversy responsibility and dilemma The New Brain Sciences Perils and Prospects examines the implications of recent discoveries in terms of our sense of individual responsibility and personhood With contributing chapters from respected and influential names in neuroscience law psychology philosophy and sociology The New Brain Sciences should kick start a discussion of where neuroscience is headed

Columbia Companion to Twentieth-Century Philosophies Constantin V. Boundas, 2007 Columbia Companion to Twentieth Century Philosophies is the first guide to cover both the Anglo American analytic and European continental traditions Organized thematically the volume thoroughly discusses the major movements and fields of each tradition and features the contributions of highly distinguished specialists in their fields This book is divided into three sections The first is devoted to highlighting the multidimensional work of philosophers identified with the analytic tradition with Nicholas Rescher writing on neoidealism Josephine Donovan commenting on feminist philosophy Tyler Burge discussing the philosophy of language and mind and Robert Hanna reflecting on Kant's legacy The second section presents the thought of those who identified themselves with the continental tradition featuring Jean Grondin on hermeneutics Leonard Lawlor on phenomenology Charles Scott on postmodernism and Babette Babich on the philosophy of science This volume also covers logical positivism naturalism pragmatism aesthetics existentialism Marxism the Frankfurt School structuralism psychoanalysis political

philosophy ethics and the philosophy of religion The final section addresses concurrent trends in Indian Chinese Japanese and African philosophy and a comprehensive introduction by the editor not only provides a thorough outline of the problems and issues of the analytic and continental traditions but also boldly challenges the conviction that the two approaches must be rivals Columbia Companion to Twentieth Century Philosophies is an invaluable overview of the ideas that have shaped a monumentally important century in the history of philosophy offering an unusually panoramic perspective that allows readers to form their own interpretations of original materials

Gender, Health and Healing Gill Bendelow, Mick Carpenter, Caroline Vautier, Simon

Williams, 2012-09-10 What do we mean by gender and how does this relate to health How is biology best understood What does a focus on the division of labour bring to our understanding of health work Is gender equity in health possible How have developments such as the resurgence of emotions and the new genetics affected these and other social relations at the turn of the century These are just some of the questions addressed in Gender Health and Healing in which a whole range of issues are brought together and connected to emerging concerns in contemporary life such as the new genetics and transformations in biomedical knowledge and practices It offers a challenging assessment of gender relations and embodied practices across the public private divide using health and healing as paradigmatic examples This thought provoking volume lies at the intersection of gender studies the sociology of health and healing health policy the critical analysis of scientific knowledge and the current debates around the body health and emotions Bringing together new and leading scholars in the field it provides a unique critical overview of contemporary debates in health care for an interdisciplinary readership

Matters of Care María Puig de la Bellacasa, 2017-03-21 To care can feel good or it can feel bad It can do good it can oppress But what is care A moral obligation A burden A joy Is it only human In Matters of Care Mar a Puig de la Bellacasa presents a powerful challenge to conventional notions of care exploring its significance as an ethical and political obligation for thinking in the more than human worlds of technoscience and naturecultures Matters of Care contests the view that care is something only humans do and argues for extending to non humans the consideration of agencies and communities that

make the living web of care by considering how care circulates in the natural world The first of the book's two parts Knowledge Politics defines the motivations for expanding the ethico political meanings of care focusing on discussions in science and technology that engage with sociotechnical assemblages and objects as lively politically charged things The second part Speculative Ethics in Antiecollogical Times considers everyday ecologies of sustaining and perpetuating life for their potential to transform our entrenched relations to natural worlds as resources From the ethics and politics of care to experiential research on care to feminist science and technology studies Matters of Care is a singular contribution to an emerging interdisciplinary debate that expands agency beyond the human to ask how our understandings of care must shift if we broaden the world
