Low Cost Sewerage:

Low-Cost Sewerage Duncan Mara, 1996-10-07 Low cost sewerage provides practical solutions to the sanitation needs of low income areas. As a result of the currently very rapid urban population growth, the demand for sewerage exceeds the resources of most high density urban areas in developing countries. Low cost alternatives to conventional sewerage such as settled sewerage and simplified sewerage therefore need to be developed. This book is the result of contributions by both academics and practitioners who attended the International Conference on Low cost Sewerage which was held at the University of Leeds, England, in July 1995. Low cost sewerage technologies are described and their applications in both developed and developing countries are detailed.

Low Cost Urban Sanitation Duncan Mara, 1996-12-23 This book covers the public health, technical, socioeconomic, sociocultural, and institutional aspects of sanitation in towns and cities of developing countries. The text features excreta-related diseases and the use of sanitation to reduce their transmission. The sanitation technologies covered in detail are VIP latrines, pour flush toilets, septic tanks, settled sewerage, and simplified sewerage, with additional chapters on sullage disposal, pit emptying, and sewage treatment and reuse. Sociocultural constraints on sanitation systems and their socioeconomic costing are described together with hygiene education, which is essential in order to achieve maximum benefits to health. The text also explains how to choose the most appropriate sanitation option for a given low income community. Finally, institutional aspects are reviewed, including effective sanitation programme planning, monitoring, and evaluation.

Hand Book of Low Cost Housing A. K. Lal, 1996 In recent years, there is a growing emphasis on low cost housing to meet the housing requirements of the millions in the country. This book makes an attempt to bring various issues related to low cost housing under one umbrella, viz. innovative, cost-effective construction techniques and materials, availability of funds for undertaking housing programmes, hindrances in the availability of land due to several legal complications, upgradation of slums and squatter settlements, low cost infrastructure services, rural housing scenario, and measures to be adopted for making safe and durable houses in areas prone to natural disasters. The information contained in the book might prove beneficial to the engineering and architectural students, professionals, architects, and engineers, both in private and public sectors, academicians, including economists and sociologists, and entrepreneurs in building industry. The book might also serve as a useful reference for B.Tech, B.Arch, M.Tech, M.Arch courses and Ph.D. programmes offered by several Indian and foreign universities.
