Lucy's Eggs Rick Henry, 2006-05-11 Lucy's Eggs Short Stories and a Novella is a collection of four stories and a novella all set in Homer a town in upstate New York that is both particular and universal in its representation of small town life Rick Henry's vivid characters at once intimately familiar and wholly unique are combined with masterful narration to deliver a series of stories the reader will not soon forget Set in the late 1800s and early 1900s the title story chronicles the life of Lucy Delano as she bears witness to the dramatic changes that her small town confronts Fiercely independent and deeply connected to the land Lucy endures the loss of her parents desertion by her husband and alienation by the townsfolk Through Lucy's blend of strength and vulnerability Henry powerfully explores issues of individuality loneliness and grief In The Telephone Girl a young man struggles to act on his emotions for Mimi the telephone girl of the title His paralysis na vet and repression are deftly treated with humor and poignancy Cardinal Wars details the competition between two neighbors to attract birds specifically colorful cardinals to their backyards For both women the birds represent the desire for companionship and survival a bright warm blast of color during the long bleak winter Filled with energy and life each story depicts vivid images of rural life and the deep but subtle range of human emotion Henry's lyrical often elegiac prose is evocative of Thornton Wilder and William Kennedy This book will appeal to the general reader but especially to those with an interest in regional literature

Vision, Science and Literature, 1870-1920 Martin Willis, 2015-10-06 This book explores the Victorian concept of vision across scientific and cultural forms Willis charts the characterization of vision through four organizing principles small large past and future to arrive at a Victorian conception of what vision was Willis then explores how this Victorian vision influenced twentieth century ways of seeing

Dynamic Stabilisation of the Biped Lucy Powered by Actuators with Controllable Stiffness Bram Vanderborght, 2010-09-07 This book reports on the developments of the bipedal walking robot Lucy Special about it is that the biped is not actuated with the classical

electrical drives but with pleated pneumatic artificial muscles In an antagonistic setup of such muscles both the torque and the compliance are controllable From human walking there is evidence that joint compliance plays an important role in energy efficient walking and running Moreover pneumatic artificial muscles have a high power to weight ratio and can be coupled directly without complex gearing mechanism which can be beneficial towards legged mechanisms Additionally they have the capability of absorbing impact shocks and store and release motion energy This book gives a complete description of Lucy the hardware the electronics and the software A hybrid simulation program combining the robot dynamics and muscle valve thermodynamics has been written to evaluate control strategies before implementing them in the real biped
