Luminescence and Anisotropy of Zinc Sulfide Crystals M. D. Galanin, 1988 *Electroluminescence / Elektrolyuminesentsiya / Электролюминесценция* D. V. Skobel tsyn, 2013-03-09 **Volume 25: Optical Methods of Investigating Solid Bodies** D. V. Skobel tsyn, 2013-04-17 The principal results of the work are as follows 1 A simplified technique was devised for obtaining Raman spectra of powders 2 The Raman and infrared absorption spectra of the following oxides were investigated AsP₃ SbP₃ As₂O₃ SbP₅ TeO₂ GeO₂ two forms in the crystalline state and AsP₃ GeO₂ TeO₂ in the glassy state 2 5 2 3 The vibrational spectra of the crystalline and glassy forms of the oxides AsP₃ GeO₂ TeO₂ are similar in many main respects indicating a similarity of their structural units which determine the vibrational spectra of these substances 4 By a study of the vibrational spectrum it was shown that arsenious anhydride has a molecular structure and consists of AsO₂ molecules having symmetry of the point group Td The force constants and vibration frequencies of the AsO₂ molecule were calculated and the vibrational spectrum of arsenious anhydride was reliably interpreted with the aid of these results 5 A similar result was obtained for antimonous anhydride consisting of SbO₂ molecules with symmetry of the point group Td The force constants for this molecule were found and the vibrational spectrum was calculated **Inelastic Light Scattering in Crystals** Mikhail Mikhailovich Sushchinskii, 1989 Translation from the 1987 Russia edition These proceedings address issues in solid state optics and physics Raman scattering in crystals and dispersive media Rayleigh and inelastic scattering with phase transitions the features of ferroelectrics in connection with the general concept of soft mode **New Developments in Quantum Cosmology Research** Albert Reimer, 2005 Horizons in World Physics Volume 247 New Developments in Quantum Cosmology Research **Instabilities of Relativistic Electron Beam in Plasma** Valery B. Krasovitskii, 2008 This book is devoted to the non linear theory of the collective interaction between a modulated beam of relativistic charged particles and narrow electromagnetic and Langmuir wave packets in plasma or gas slow wave systems Regular oscillations excited by a relativistic beam under the conditions of Cherenkov resonance and the anomalous Doppler effect can be used to generate coherent microwave radiation and accelerate charged particles in plasma **Models and Methods of High-Tc Superconductivity** J. K. Srivastava, Sadasiva Madiraju Rao, 2003 The articles in this exceptional book contain regular papers extended papers and reviews and thus vary in length and are useful for all kinds of audience They describe as the book's name suggests HTSC models and methodologies Physical models like extended BCS model bipolaron model spin bag model RVB resonating valence bond model preformed Cooper pairs and antiferromagnetic spin fluctuation AFSF based models stripe phase paired cluster spin glass SG frustration based model Kamimura Suwa Hund's coupling mechanism based model electron plasmon interaction electron phonon interaction etc theoretical methods methodologies like generalised BCS Migdal Eliashberg theory Hubbard model t-J model t-t-U model Hubbard Holstein model Fermi non-Fermi and marginal Fermi liquid concepts generalised Hartree Fock formalism etc and experimental status and

methodologies are all described there For comparison with cuprates fullerenes ruthenates organic non Cu containing oxide and conventional elemental A15 superconductors molecular crystals nickelates manganites borides etc are also discussed

Self Focusing of Relativistic Electron Bunches in Plasma Valery B. Krasovitskii, 2008 This volume presents the non linear theory of electrostatic focusing of an electron beam split into bunches under conditions when the plasma permittivity at the modulation frequency is negative and the effective Coulomb force acting on the electron bunches is reversed Conditions for the spatial equilibrium between the bunch and plasma emission as well as the dynamics of the formation of focussed bunches are confirmed by solving both analytically and numerically the self consistent set of equations *General Relativity*

Research Trends Albert Reimer, 2006 *General Relativity Research Trends* *Quantum Gravity Research Trends* Albert Reimer, 2006 *Quantum Gravity Research Trends* *Research in Quantum Field Theory* Vladimir Ivanovich Man'ko, 1996 *Research In Quantum Field Theory* **Quantum Cosmology Research Trends** Albert Reimer, 2005 **Generalized**

Functions in Mathematical Physics A. S. Demidov, 2001 This important book gives an interconnected presentation of some basic ideas concepts results of the theory of generalised functions first of all in the framework of the theory of distributions and equations of mathematical physics A part of the material is given according to the scheme definition theorem proof This scheme is convenient for presenting results in clear and concentrated form However it seems reasonable to give a student the possibility not only to study a priori given definitions and proofs of theorems but also to discover them while considering the problems involved A series of sections serve this purpose Moreover a part of the material is given as exercises and problems **Atomic and Ionic Spectra and Elementary Processes in Plasma** Igor' Il'ich Sobel'man, 1992 Eight highly

technical studies explore a wide range of problems involved in investigating the short wavelength emission of the solar corona The topics include the experimental results from solar X ray investigations the calculated excitation cross sections for collisions of atoms and ions with charged particles and spectra of plasmas Annotation *Spacetime Physics Research*

Trends Albert Reimer, 2005 *Spacetime Physics Research Trends* **Photoproduction of Pions on Nucleons and Nuclei** A. A. Komar, 1989 Studies the theoretical and experimental aspects of photoproduction of pions on nucleons and nuclei in the range of photon energies up to 1 GeV Theoretical predictions are presented based on dispersion relationships of multiple pion photoproduction amplitudes The problem of a complete experiment i *New Topics in Theoretical Physics* Henk F.

Arnoldus, Thomas F. George, 2007 Although the various branches of physics differ in their experimental methods and theoretical approaches certain general principles apply to all of them The forefront of contemporary advances in physics lies in the submicroscopic regime whether it be in atomic nuclear condensed matter plasma or particle physics or in quantum optics or even in the study of stellar structure All are based upon quantum theory i e quantum mechanics and quantum field theory and relativity which together form the theoretical foundations of modern physics Many physical quantities whose classical counterparts vary continuously over a range of possible values are in quantum theory constrained to have

discontinuous or discrete values The intrinsically deterministic character of classical physics is replaced in quantum theory by intrinsic uncertainty According to quantum theory electromagnetic radiation does not always consist of continuous waves instead it must be viewed under some circumstances as a collection of particle like photons the energy and momentum of each being directly proportional to its frequency or inversely proportional to its wavelength the photons still possessing some wavelike characteristics This book presents state of the art research from around the world
