Lavenda, 2019-04-17 This book develops in detail the statistical foundations of nonequilibrium thermodynamics based on the mathematical theory of Brownian motion Author Bernard H Lavenda demonstrates that thermodynamic criteria emerge in the limit of small thermal fluctuations and in the Gaussian limit where means and modes of the distribution coincide His treatment assumes the theory of Brownian motion to be a general and practical model of irreversible processes that are inevitably influenced by random thermal fluctuations This unifying approach permits the extraction of widely applicable principles from the analysis of specific models Arranged by argument rather than theory the text is based on the premises that random thermal fluctuations play a decisive role in governing the evolution of nonequilibrium thermodynamic processes and that they can be viewed as a dynamic superposition of many random events Intended for nonmathematicians working in the areas of nonequilibrium thermodynamics and statistical mechanics this book will also be of interest to chemical physicists condensed matter physicists and readers in the area of nonlinear optics     The Theory of Spinors Élie Cartan, 2012-04-30 Describes orthogonal and related Lie groups using real or complex parameters and indefinite metrics Develops theory of spinors by giving a purely geometric definition of these mathematical entities     **Selected Papers on Noise and Stochastic Processes** Nelson Wax, 1954-01-01 These six classic papers on stochastic process were selected to meet the needs of professionals and advanced undergraduates and graduate students in physics applied mathematics and engineering Contents include Stochastic Problems in Physics and Astronomy by S Chandrasekhar from Reviews of Modern Physics Vol 15 No 1 On the Theory of Brownian Motion by G E Uhlenbeck and L S Ornstein from Physical Review Vol 36 No 3 On the Theory of the Brownian Motion II by Ming Chen Wang and G E Uhlenbeck from Reviews of Modern Physics Vol 17 Nos 2 and 3 Mathematical Analysis of Random Noise by S O Rice from Bell System Technical Journal Vols 23 and 24 Random Walk and the Theory of Brownian Motion by Mark Kac from American Mathematical Monthly Vol 54 No 7 The Brownian Movement and Stochastic Equations by J L Doob from Annals of Mathematics Vol 43 No 2     **A History of Astronomy** Anton Pannekoek, 1989-01-01 Well balanced carefully reasoned study covers such topics as Ptolemaic theory work of Copernicus Kepler Newton Eddington s work on stars much more Illustrated References     The Subjectivity of Scientists and the Bayesian Approach S.
