Agents M. Sovak,2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems The position of CM in pharmacology is unique First there is the unusual requirement of biological inertness An ideal CM should be completely biologically inert i e stable not pharmacologically active and efficiently and innocuously excretable Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future Progress in Lymphology R. Mattrey,2012-12-06 The use of contrast media within diagnostic radiology has been firmly established for many years now. Radiologic contrast media render immense services in daily clinical practice to innumerable patients all over the world. When the new cross sectional modalities such as computed tomography and magnetic resonance imaging were introduced into clinical practice it rapidly became evident that the judicious use of contrast media allows the optimal exploitation of the great diagnostic potential of these revolutionary methods. More recently efforts to create specific contrast media for ultrasound imaging have been successful and the first beneficial results of their application in daily practice are now evident. The aim of this book is to bring together the results of the tremendous research that has been performed during recent years in order to develop specific contrast media for magnetic resonance imaging and ultrasonography and also to develop safer contrast media for the classical radiologic techniques as well as computed tomography. Moreover the book provides a comprehensive overview of the indications for and applications of these new contrast media in clinical radiology. Finally risks, side effects and complications which may occur with the use of these drugs are covered appropriately. The three editors are leading and well known experts in their specific field. They have been very successful in ensuring the collaboration of so many internationally known specialists to cover the different topics dealt with in this book.
