Interleukins, Lymphokines, and Cytokines Joost J. Oppenheim, Stanley Cohen, Maurice Landy, 1983 *Lymphokines and Interleukins* Maureen M. Dawson, 1991 **Lymphokines and Interleukins** Maureen Dawson, 1991 Lymphokines are molecules which exert biological effects on various aspects of the immune system often by modulating the activities of other components within the system This book emphasizes their importance for the immune response and considers general methods for in vitro production such as lymphocyte cloning and T cell hybridoma technology Their therapeutic and commercial potential makes them the subject of research activity and the author considers those which may have industrial and clinical significance The Interleukins Steven Gillis, 2013-03-14 Investigations of the activation proliferation and in some cases differentiation of mononuclear cells involved in the immune response are proceeding rapidly These studies have resulted in the discovery of several factors that promote these cellular events some of which have been characterized biochemically to various extents Because of the considerable interest in understanding these cellular changes at the molecular level we chose to produce the first thematic volume for Contemporary Topics in Molecular Immunology the theme deals with certain regulatory factors that promote proliferation and differentiation We have compiled contributions from numerous scientists well known for their work with several regulatory factors In the following paragraphs the reader will find an overview of the contents of this volume Greene and Robb review data they have generated over the past 2 3 years with respect to characterization of hormone specific Interleukin 2 IL 2 receptors on the surface of activated T cells Their chapter traces the development of a quantitative assay for assessment of IL 2 receptors based on the preparation and use of radiolabeled IL 2 prepared biosynthetically with the aid of IL 2 producer leukemic cells The authors then describe an alternate approach the preparation of a monoclonal antibody previously determined to be directed against a T cell activation antigen This so called anti Tac antibody was later found to recognize a determinant on or near the IL 2 receptor **Military Strategies for Sustainment of Nutrition and Immune Function in the Field** Institute of Medicine, Committee on Military Nutrition Research, 1999-05-13 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries Combined stressors may reduce the normal ability of soldiers to resist pathogens increase their susceptibility to biological warfare agents and reduce the effectiveness of vaccines intended to protect them There is also a concern with the inappropriate use of dietary supplements This book one of a series examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field It reviews the impact of compromised nutrition status on immune function the interaction of health exercise and stress both physical and psychological in immune function

and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function The first part of the book contains the committee s workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops responses to the Army s questions conclusions and recommendations The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as an introduction to what is known about immune function the assessment of immune function the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health *Immunology of Pregnancy and Cancer* V.
