Gearing, 1987 A practical response to the increase of interest in the fields of interferon and lymphokine research presenting the techniques involved with these independent areas of research *Cytokine Protocols* Marc De Ley, 2008-02-03 A collection of biochemical cellular and molecular techniques for unraveling and quantifying the events occurring between the initial contact of a cytokine at the membrane receptor and the eventual activation of gene transcription The techniques used include the generation of transfectants the immunohistochemical detection of cytokines in tissue sections and optimized staining for cytoplasmic detection Highlights include RT PCR of small amounts of mRNA in situ hybridization biosensor analysis measurement of biological activities and standardization immunohistochemical and single cell detection and receptor isolation characterization and crystallization Enjoy a quick and smooth introduction to the key methods used in cytokine research Use readily reproducible techniques that ensure successful experimental results Employ antisense RNA RT PCR of small amounts of mRNA and in situ hybridization **The Interferons** Anthony Meager, 2006-08-21 At long last the first book to cover all important areas of interferon science in one volume Top scientists including many pioneers in the field highlight the role of interferons as research tools and as therapeutic agents in clinical applications Edited by an experienced interferonologist chapters include discussions of interferon genes Type I II and III IFNs as well as their induction production and purification receptors actions measuring IFN activities and anti IFN antibodies as well as the evolution of viral defense mechanisms For immunologists cancer researchers medicinal chemists cell biologists developmental biologists and the pharmaceutical industry **The Cytokine Handbook** Angus W. Thomson, Michael T. Lotze, 2003 The fourth edition of The Cytokine Handbook provides an encyclopedic coverage of the molecules that induce and regulate immune responses Expanded to two volumes the scope of the book has been broadened to include a major emphasis on the clinical applications of cytokines The early chapters discuss individual cytokines chemokines and receptors Additional chapters discuss the clinical implications and applications of cytokines including cytokine gene transfer antisense therapy and assay systems *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1988 **Anti-Infective Applications of Interferon-Gamma** H.S. Ribonucleases Giuseppe D'Alessio, James F. Riordan, 1997-02-11 Pancreatic ribonuclease the focus of highly productive scientific research for more than half a century and the only enzyme to be the basis of four Nobel prizes has recently undergone a resurgence in popularity for the recognition of an extended ribonuclease superfamily with functions ranging from tumour growth and inhibition to self recognition and neurotoxicity This volume highlights the functional diversity of ribonucleases and reveals the emerging research opportunities provided by these enzymes Never before has discussion of the entire family of ribonucleases and related enzymes been covered in a single volume Core chapters focus on the latest structures and functions of pancreatic type ribonucleases Structures and functions of intracellular ribonucleases and nondigestive members of the family are also covered How ribonucleases continue to serve as excellent systems with which to uncover the secrets of protein chemistry is demonstrated Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70

Proteins, Peptides and Amino Acids SourceBook John Stephen White, Dorothy Chong White, 2002-04-15 Proteins Peptides and Amino Acids SourceBook is the second in a series of reference books conceived to cover the explosive growth in commercially available biological reagents The success of our first reference work Source Book of Enzymes published in 1997 encouraged us to continue this series Choosing proteins peptides and amino acids as the subject matter for the second volume was simple given their preeminence in regulating biochemical processes and their importance to modern molecular biology The SourceBook series was inspired by our difficulty in locating a suitable replacement for a depleted reagent in the midst of an urgent research project To our dismay we found the reagent supplier out of business and the product line no longer available Other reagent catalogs on our library bookshelf offered a narrow selection and incomplete functional information We were ultimately able to locate a satisfactory alternative only by making countless inquiries and paging through innumerable product catalogs and technical data sheets We needed but could not find a single resource that cataloged available compounds organized them in a logical and accessible format provided critical technical information to distinguish one from another and told us where we could buy them

Pancreatic Cancer Gloria H. Su, 2008-02-01 Pancreatic ductal adenocarcinoma is the fourth leading cause of cancer death in the United States Annually approximately 30 000 Americans are diagnosed with the disease and most will die from it within five years Pancreatic ductal adenocarcinoma is unique because of its late onset in age high mortality small tumor samples infiltrated with normal cells and a lack of both early detection and effective therapies Some of these characteristics have made studying this disease a challenge Pancreatic cancer develops as a result of the accumulation of genetic alterations in cancer causing genes such as the oncogenes and the tumor suppressor genes In the last decade major progress has been made in identifying important oncogenes and tumor suppressor genes for the disease In Pancreatic Cancer Methods and Protocols we review the classical techniques that have contributed to the advances in pancreatic research and introduce new

strategies that we hope will add to future breakthroughs in the field of cancer biology Pancreatic Cancer Methods and Protocols provides a broad range of protocols for molecular cellular pathological and statistical analyses of sporadic and familial pancreatic cancer It covers topics from in vitro cell cultures to in vivo mouse models DNA to protein manipulation and mutation analyses to treatment development We believe that our book will prove an invaluable source of proven protocols for those who are interested in either basic or translational research in pancreatic cancer Pathophysiology Lachel

National Cancer Institute ,1995 *Immunotherapy of Disease* T.J. Hamblin,2012-12-06 Immunotherapy began in 1774 when the Dorset farmer Benjamin Jesty inoculated his wife and two sons with the pus from the teat of a cow suffering from cow pox using his wife's knitting needle as a vaccinating implement It has made slow progress Meanwhile the science of Immunology has burgeoned so much that if all immunologists read every page of the Journal of Immunology let alone the other Immunology journals then they would have no time left to write for it I am pleased that some of them have found the time to write for this volume In spite of the rapid expansion in immunological knowledge and the undreamt of complexity of the immune system that has been unravelled immunologists have remained until recently erudite but therapeutically effete Indeed anyone purporting to treat disease by immunological methods has been in danger of being labelled a quack or a crackpot Happily things are changing The nine chapters of this volume detail nine quite different approaches to manipulating the immune system for therapeutic benefit All are experimental and they have been attended with greater or lesser degrees of success In some cases their main effect has been to elucidate the complexity of the problem On the other hand there are people alive and well today as a result of these approaches who would otherwise have perished Immunotherapy is here to stay and it can only get better The Biology of the Interferon System 1986 K. Production of Recombinant Proteins Gerd Gellissen, 2006-03-06 While the choices of microbial and eukaryotic expression systems for production of recombinant proteins are many most researchers in academic and industrial settings do not have ready access to pertinent biological and technical information since it is normally scattered throughout the scientific literature This book closes the gap by providing information on the general biology of the host organism a description of the expression platform a methodological section with strains genetic elements vectors and special methods where applicable as well as examples of proteins produced with the respective platform The systems thus described are well balanced by the inclusion of three prokaryotes two Gram negatives and one Gram positive four yeasts two filamentous fungi and two higher eukaryotic cell systems mammalian and plant cells Throughout the book provides valuable practical and theoretical information on the criteria and schemes for selecting the appropriate expression platform the possibility and practicality of a universal expression vector and on comparative industrial scale fermentation with the production of a recombinant Hepatitis B vaccine chosen as an industrial example With a foreword by Herbert P Schweizer Colorado State University USA As a whole this book is a valuable and overdue resource for a varied audience It is a practical guide for academic and industrial researchers who are confronted with the design of the most suitable expression platform for their favorite protein for

technical or pharmaceutical purposes In addition the book is also a valuable study resource for professors and students in the fields of applied biology and biotechnology *Detection and Quantification of Antibodies to Biopharmaceuticals* Michael G. Tovey, 2011-07-12 The definitive book on the neutralization of recombinant biopharmaceuticals Recombinant biopharmaceuticals are an important tool for treating a range of illnesses however their efficacy can be severely impaired by their immunogenicity When introduced into the body these pharmaceuticals can cause the immune system to produce anti drug antibodies ADAs that neutralize their effects The first and only book to cover neutralization in connection with biopharmaceuticals and the measurement and application of neutralizing antibodies in modern medicine at any real length *Detection and Quantification of Antibodies to Biopharmaceuticals Practical and Applied Considerations* offers a comprehensive and in depth look at all the principal aspects of the detection and quantification of antibodies that are essential to understanding and responding to the challenges they present Bringing together a large scale review of neutralization and biopharmaceuticals and the ability to measure detect and apply antibodies to modern science and medicine with international regulatory perspectives the expectations of regulatory authorities and the strengths and weaknesses of various assays the book describes several novel ideas for detecting ADAs Designed to serve as a resource for biopharmaceutical drug development the book provides biotechnology companies and pharmaceutical drug development specialists as well as non experts with key insights into the design optimization and qualification of assays the establishment of sampling strategies the choice of appropriate assay end points and data analysis for the detection and quantification of neutralizing antibodies
