Machiavellian Intelligence:

Machiavellian Intelligence Richard W. Byrne, Andrew Whiten, 1988 **The MIT Encyclopedia of the Cognitive Sciences (MITECS)** Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X bar Theory Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science Philosophy Psychology Neurosciences Computational Intelligence Linguistics and Language and Culture Cognition and Evolution For both students and researchers MITECS will be an indispensable guide to the current state of the cognitive sciences Machiavellian Intelligence II Andrew Whiten, Richard W. Byrne, 1997-09-25 This book aims to explain the intelligence of monkeys and apes and the huge brain expansion that marked human evolution In 1988 Machiavellian Intelligence was the first book to assemble the early evidence suggesting a new answer that the evolution of intellect was primarily driven by selection for manipulative social expertise within groups where the most challenging problem faced by individuals was dealing with their companions Since then a wealth of new information and ideas has accumulated This new book will bring readers up to date with the most important developments extending the scope of the original ideas and evaluating them empirically from different perspectives It is essential reading for researchers and students in many different branches of evolution and behavioral sciences primatology and philosophy **Handbook of Individual Differences in Social Behavior** Mark R. Leary, Rick H. Hoyle, 2009-06-05 How do individual differences interact with situational factors to shape social behavior Are people with certain traits more likely to form lasting marriages experience test taking anxiety break the law feel optimistic about the future This handbook provides a comprehensive authoritative examination of the full range of personality variables associated with interpersonal judgment behavior and emotion The contributors are acknowledged experts who have conducted influential research on the constructs they address Chapters discuss how each personality attribute is conceptualized and assessed review the strengths and limitations of available measures including child and adolescent measures when available present important findings related to social behavior and identify directions for future study *Mothers and Others* Sarah Blaffer Hrdy, 2011-04-15 Sarah Hrdy argues that if human babies were to survive in a world of scarce resources they would need to be cared for not only by their mothers but also by siblings aunts fathers friends and with any luck grandmothers Out of this complicated and contingent form of childrearing says Hrdy came the human capacity for understanding others **Artificial Intelligence, Evolutionary Computing and Metaheuristics** Xin-She Yang, 2012-07-27 Alan Turing pioneered many research areas such

as artificial intelligence computability heuristics and pattern formation Nowadays at the information age it is hard to imagine how the world would be without computers and the Internet Without Turing's work especially the core concept of Turing Machine at the heart of every computer mobile phone and microchip today so many things on which we are so dependent would be impossible 2012 is the Alan Turing year a centenary celebration of the life and work of Alan Turing To celebrate Turing's legacy and follow the footsteps of this brilliant mind we take this golden opportunity to review the latest developments in areas of artificial intelligence evolutionary computation and metaheuristics and all these areas can be traced back to Turing's pioneer work Topics include Turing test Turing machine artificial intelligence cryptography software testing image processing neural networks nature inspired algorithms such as bat algorithm and cuckoo search and multiobjective optimization and many applications These reviews and chapters not only provide a timely snapshot of the state of art developments but also provide inspiration for young researchers to carry out potentially ground breaking research in the active diverse research areas in artificial intelligence cryptography machine learning evolutionary computation and nature inspired metaheuristics This edited book can serve as a timely reference for graduates researchers and engineers in artificial intelligence computer sciences computational intelligence soft computing optimization and applied sciences *Encyclopedia of leadership* George R. such as the origins and function of sexual reproduction mating behavior human mate choice patterns of violence in families altruistic behavior the evolution of brain size and the origins of language the modular mind and the relationship between genes and culture

Human Evolution John L. Bradshaw, 2014-01-02 The last decade has seen an explosive burst of new information about human origins and our evolutionary status with respect to other species We have long been considered unique as upright bipedal creatures endowed with language the ability to use tools to think and introspect We now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories Our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology primatology ethology archaeology palaeontology comparative linguistics and molecular biology It is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions our origin and place in the animal kingdom whether unique or otherwise which makes the general topic so fascinating to layperson student and expert alike The book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with particular reference to language praxis and aesthetics A chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates hominids and the advent of bipedalism There follows a more detailed account of the various species of Homo the morphology and origin of modern H sapiens sapiens as seen from the archaeological palaeontological and molecular biological perspectives The origins of art and an aesthetic sense in the Acheulian and Mousterian through to the Upper Palaeolithic are seen in the context of the psychology of art Two chapters on language address its nature and realization centrally and peripherally the prehistory and neuropsychology of speech and evidence for speech and or language in our hominid ancestors A chapter on tool use and praxis examines such behaviour in other species primate and non primate the neurology of praxis and its possible relation to language Encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence social intelligence consciousness and self awareness A final chapter reviews the issues covered The book of around 70 000 words of text includes over 500 references over half of which date from 1994 or later

Social Intelligence Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008 Why are humans so clever The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups Our ability to understand and control nature is a by product of our ability to understand the mental states of others and to use this knowledge to co operate or deceive These abilities have not emerged out of the blue They can be found in many social animals that co operate and compete with one another birds as well as mammals This book brings together contributions from an impressive list of authorities in the field appropriately concluding with a chapter by Nick Humphrey one of the pioneers in this field This volume examines social intelligence in many different animal species and explores its development evolution and the brain systems upon which it depends Better

understanding and further development of social intelligence is critical for the future of the human race and the world that we inhabit Our problems will not be solved by mere cleverness but by increased social co operation

Kaufman, 2013-06-17 Unlike most approaches to intelligence which rely on psychometric testing for inspiration of confirmation this bk investigates the nature developmnt of intelligence from an evolutionary perspective For cognitive scientists and experimental cognitiv

Origins of Intelligence Sue Taylor Parker, Michael L. McKinney, 2021-04-27 A look at the origins of cognitive abilities in primate species Since Darwin s time comparative psychologists have searched for a good way to compare cognition in humans and nonhuman primates In *Origins of Intelligence* Sue Parker and Michael McKinney offer such a framework and make a strong case for using human development theory both Piagetian and neo Piagetian to study the evolution of intelligence across primate species Their approach is comprehensive covering a broad range of social symbolic physical and logical domains which fall under the all encompassing and much debated term intelligence A widely held theory among developmental psychologists and social and biological anthropologists is that cognitive evolution in humans has occurred through juvenilization the gradual accentuation and lengthening of childhood in the evolutionary process In this work however Parker and McKinney argue instead that new stages were added at the end of cognitive development in our hominid ancestors coining the term adultification by terminal extension to explain this process Drawing evidence from scores of studies on monkeys great apes and human children this book provides unique insights into ontogenetic constraints that have interacted with selective forces to shape the evolution of cognitive development in our lineage The authors elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas Jonas Langer *Human Development* A handy source of information on comparative cognitive abilities related to life history and brain variables James Anderson *Journal of the Royal Anthropological Institute*

Machiavelliana Michael Jackson, Damian Grace, 2018-06-05 In *Machiavelliana* Michael Jackson and Damian Grace offer a comprehensive study of the uses and abuses of Niccol Machiavelli s name in society generally and in academic fields distant from his intellectual origins It assesses the appropriation of Machiavelli in didactic works in management social psychology and primatology scholarly texts in leaderships studies as well as novels plays commercial enterprises television dramas operas rap music Mach IV scales children s books and more The book audits surveys examines and evaluates this Machiavelliana against wider claims about Machiavelli It explains the origins of Machiavelli s reputation and the spread of his fame as the foundation for the many uses

and misuses of his name They conclude by redressing the most persistent distortions of Machiavelli

Philosophy and the Emotions Anthony Hatzimoysis,2003-07-21 This major volume of original essays maps the place of emotion in human nature through a discussion of the relation between consciousness and body by analysing the importance of emotion for human agency by pointing to the ways in which practical rationality may be enhanced as well as hindered by emotions and by exploring questions of value in making sense of emotions at a political ethical and personal level Leading researchers in the field reflect on the nature of human feelings how and why we understand what other people feel and the way in which our values become involved in specific emotional phenomena such as guilt fear shame amusement or love This collection addresses important questions in the philosophy of mind and comments on the implications of research in biology cognitive psychology psychoanalysis and narrative theory for the philosophical understanding of emotions

Evolutionary Explanations of Human Behaviour John H. Cartwright,2023-05-31 In recent years a new discipline has arisen that argues human behaviour can be understood in terms of evolutionary processes Evolutionary Explanations of Human Behaviour is an introductory level book covering evolutionary psychology this new and controversial field The book deals with three main areas human reproductive behaviour evolutionary explanations of mental disorders and the evolution of intelligence and the brain The book is particularly suitable for the AQA A A2 syllabus but will also be of interest to undergraduates studying evolutionary psychology for the first time and anyone with a general interest in this new discipline

Transcendental Medication Christopher D. Lynn,2022-04-28 Transcendental Medication considers why human brains evolved to have consciousness yet we spend much of our time trying to reduce our awareness It outlines how limiting consciousness rather than expanding it is more functional and satisfying for most people most of the time The suggestion is that our brains evolved mechanisms to deal with the stress of awareness in concert with awareness itself otherwise it is too costly to handle Defining dissociation as partitioning of awareness Lynn touches on disparate cultural and psychological practices such as religion drug use 12 step programs and dancing The chapters draw on biological and cultural studies of Pentecostal speaking in tongues and stress the results of our 800 000 years watching hearth and campfires and unconscious uses of self deception as mating strategy Written in a highly engaging style Transcendental Medication will appeal to students and scholars interested in mind altered states of consciousness and evolution It is particularly suitable for those approaching the issue from cultural biological psychological and cognitive anthropology as well as evolutionary psychology cognitive neuroscience and religious studies

Encyclopedia of the Sciences of Learning Norbert M. Seel,2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several

paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences

Piaget, Evolution, and Development Jonas Langer, Melanie Killen, 1998-06 This volume brings the current interest in primate cognition to bear on studies of cognitive development in humans with chapters from leading researchers in both areas For cognitive developmentalists and primatologists and comparative psychologists
