Virtual Machines Iain D. Craig, 2010-05-17 I love virtual machines VMs and I have done for a long time If that makes me sad or an anorak so be it I love them because they are so much fun as well as being so useful They have an element of original sin writing assembly programs and being in control of an entire machine while still being able to claim that one is being a respectable member of the community being structured modular high level object oriented and so on They also allow one to design machines of one s own unencumbered by the restrictions of a starts optimising it for some physical particular processor at least until one processor or other I have been building virtual machines on and off since 1980 or there abouts It has always been something of a hobby for me it has also turned out to be a technique of great power and applicability I hope to continue working on them perhaps on some of the ideas outlined in the last chapter I certainly want to do some more work with register based VMs and concurrency I

The Virtual Mind Designing the Logic to Approximate Human Thinking through an in depth and multidisciplinary review outlines and defines the underpinnings for modelling human thinking through approximating the mind Whilst there are plenty of efforts underway trying to mimic the brain its complexities have so far proven insurmountable But replicating the abstract notion of the mind provides a viable and quicker route Broadly the mind consists of a conscious and an unconscious part with separate logic schemes and these absorb reality in diverging chunks with the former truncated through narratives and norms and the latter able to amass broader perceptions of reality These are held together and controlled through a governing mechanism With the replication and establishment of the mind s mechanistic rules and dynamic constants tested through a big data approach from public media it allows for standardization and machine generated human thinking a Virtual Mind A virtual mind is able to cover a wide array of applications in particular forecasting of human behavior and decision making In essence the whole socioeconomic spectra can be captured including politics financial markets and consumer patterns Another area of potential application would be to augment various game software and of course it would be applicable for the man machine connect The book guides the reader on how to develop and produce a machine generated virtual mind in a step by step manner It is a must for anyone with an interest in artificial intelligence the design and construction of the next generation of computer logic and it provides an enhanced understanding of mankind s greatest mystery the workings of the mind Niklas Hageback has extensive experience of risk modelling and financial analytics working at tier one financial institutions and consulting firms such as Deutsche Bank KPMG and Goldman Sachs where he held regional executive risk management and oversight roles in both Europe and Asia
