How the Maya Built Their World Elliot M. Abrams, 2010-06-04 Maya architecture is often described as massive and monumental but experiments at Copan Honduras convinced Elliot Abrams that 300 people could have built one of the large palaces there in only 100 days In this groundbreaking work Abrams explicates his theory of architectural energetics which involves translating structures into volumes of raw and manufactured materials that are then multiplied by the time required for their production and assembly to determine the labor costs of past construction efforts Applying this method to residential structures of the Late Classic period A D 700 900 at Copan leads Abrams to posit a six tiered hierarchic social structure of political decision making

ranging from a stratified elite to low ranking commoners By comparing the labor costs of construction and other economic activities he also prompts a reconsideration of the effects of royal construction demands on commoners How the Maya Built Their World will interest a wide audience in New and Old World anthropology archaeology architecture and engineering

Linden,2021-03-12 The question of what architecture is answered in this book with one sentence Architecture is space created for human activities The basic need to find food and water places these activities within a larger spatial field Humans have learned and found ways to adjust to the various contextual difficulties that they faced as they roamed the earth Thus rather than adapting humans have always tried to change the context to their activities Humanity has looked at the context not merely as a limitation but rather as a spatial situation filled with opportunities that allows through intellectual interaction to change these limitations Thus humanity has created within the world their own contextual bubble that firmly stands against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic Landscape Architecture and Design - Sustainability and Management
