Non-Thermal Plasma Techniques for Pollution Control Bernie M. Penetrante, Shirley E. Schultheis, 2013-06-29 Acid rain global warming ozone depletion and smog are preeminent environmental problems facing the world today Non thermal plasma techniques offer an innovative approach to the solution of some of these problems There are many types of non thermal plasma devices that have been developed for environmental applications The potential of these devices for the destruction of pollutants or toxic molecules has already been demonstrated in many contexts such as nitrogen oxides NOX and sulfur dioxide SO₂ in flue gases heavy metals and volatile organic compounds VOCs in industrial effluents and chemical agents such as nerve gases This book contains a comprehensive account of the latest developments in non thermal plasma devices and their applications to the disposal of a wide variety of gaseous pollutants

Non-thermal Plasma Techniques for Pollution Control: Overview, fundamentals, and supporting technologies Bernie M. Penetrante, Shirley E. Schultheis, 1993 Nonthermal Plasma Chemistry and Physics Jurgen Meichsner, Martin Schmidt, Ralf Schneider, Hans-Erich Wagner, 2012-11-13 In addition to introducing the basics of plasma physics Nonthermal Plasma Chemistry and Physics is a comprehensive presentation of recent developments in the rapidly growing field of nonthermal plasma chemistry The book offers a detailed discussion of the fundamentals of plasma chemical reactions and modeling nonthermal plasma sources relevant

Hazardous and Radioactive Waste Treatment Technologies Handbook Chang H. Oh, 2001-06-27 With detailed photos and schematic system diagrams the Hazardous and Radioactive Waste Treatment Technologies Handbook provides the latest information on current technologies in the market Intended as a reference for scientists engineers and engineering students it covers waste related thermal and non thermal technologies separation techniques and stabilization technologies It provides an overview of recent waste technologies for both hazardous chemical wastes and radioactive wastes By implementing the techniques presented in this book readers will be able to decide which appropriate technology to use and how to design the equipment for their particular needs

Environmental Applications of Ionizing Radiation William J. Cooper, Randy D. Curry, Kevin

E. O'Shea,1998-10-30 A unique opportunity to learn about the most important developments in environmental applications of ionizing radiation This book makes it easy for scientists and engineers to acquaint themselves with the state of the art in ionizing radiation techniques for pollution control environmental cleanup and waste processing With contributions by more than 100 researchers working in industry academia and government it reports from around the world on the most important recent advances in the field From the latest refinements in electron beam technology to new techniques for the purification of flue gases and from radiation recycling of rubber wastes to radiation induced cleanup of water and wastewater this valuable resource covers all established and emerging environmental applications of ionizing radiation The only book available in English to focus exclusively on the subject Environmental Applications of Ionizing Radiation belongs in the working library of every aspiring or practicing scientist or engineer concerned with environmental pollution Radiation has long been used in food processing medical device sterilization and polymer production but only recently has it begun to be widely accepted as a valued component in environmental cleanup initiatives The growing popularity of radiation as a means of neutralizing both natural and synthetic contaminants is due in great part to impressive results recently achieved by researchers worldwide using ionizing radiation methods especially those involving electron beam techniques Despite these many successes there continues to be a conspicuous poverty of professional references on the subject Environmental Applications of Ionizing Radiation fills that gap Environmental Applications of Ionizing Radiation brings together contributions by more than 100 leading scientists from the Americas Europe and Asia The first English language text devoted exclusively to this exciting growth area it affords readers a unique opportunity to acquaint themselves with state of the art applications of ionizing radiation for solving environmental remediation problems Featuring many fascinating and informative case studies from around the world it brings scientists and engineers quickly in line with the latest advances in Electron beam design Flue gas treatment using electron beams Ionizing radiation in pollution control Irradiation treatment of industrial wastes Irradiation treatment of soil and biosolids Irradiation and photocatalytic processes New and emerging applications of ionizing radiation Environmental Applications of Ionizing Radiation is a valuable working resource for civil chemical and environmental engineers and scientists involved with pollution control water treatment and natural and industrial waste treatment It also belongs on the syllabuses of all graduate level engineering courses in air and water management

The Modern Problems of Electrostatics with Applications in Environment Protection Ion I.

Inculet,Florin Teodor Tanasescu,Radu Cramariuc,2012-12-06 Among the many technological and legal efforts being made to restore our environment electrostatic technologies may well hold the solution to the cleaning of air water and soil Such technologies include non thermal plasma processing electron beam irradiation electrical discharge hybrid plasma systems The book also contains descriptions of the industrial implementation of the technology for NO_x and SO₂ removal using accelerated electrons This technique has been implemented in three plants built in China Poland and Japan Water pollution

can be controlled and reduced by the use of ozone and UV irradiation Soil pollution can be reduced by electrical methods and by using electrostatics to spray agricultural pesticides Further articles cover the future of EHD systems in environmental protection new aspects of ESD research and industrial waste recycling technologies *Plasma Assisted Decontamination of Biological and Chemical Agents* Selçuk Güçeri, Alexander Fridman, 2011-10-12 Plasma decontamination is a rapidly expanding area of modern science and engineering An increasing number of engineers are using plasma methods for decontamination of chemical and biological agents Plasma decontamination is effectively applied today to clean and sterilize different surfaces high volume air and water streams industrial exhausts and even living tissue of animals and humans This book provides a fundamental introduction to virtually all aspects of modern plasma decontamination as well as the most recent technological achievements in the area The book is segmented into four specific sections of modern plasma decontamination 1 plasma bio decontamination including disinfection and sterilization of surfaces water and air streams 2 plasma decontamination of chemical agents including cleaning of air water and industrial exhaust gases from different pollutants and especially volatile organic compounds VOC 3 plasma treatment of living tissue including different subjects of plasma medicine from skin sterilization to tissue engineering 4 major electric discharges applied for the plasma assisted decontamination of chemical and biological agents

Application of Non-thermal Plasmas to Pollution Control. Revision 1, 1993 Non thermal plasma techniques can be used to destroy many types of hazardous molecules They are particularly efficient when the toxic materials are present in very small concentrations This paper discusses three particular applications of non thermal plasmas 1 decomposition of hydrogen sulfide H_2S 2 removal of trichloroethylene TCE and 3 removal of nitrogen oxides NO_x Emphasis is placed on the energy cost for implementing the decomposition or removal of these pollutants Some of the factors affecting the energy cost are discussed The authors discuss in detail their work at LLNL on pulsed plasma processing for the treatment of NO_x in diesel engine exhaust The results suggest that their plasma reactor can remove up to 70% of NO_x with relatively high initial concentrations up to 500 ppM at a power consumption cost of 2.5% for an engine with an output of 14 kW and an exhaust gas flow rate of 1200 liters per minute
