Numerical Methods for Roots of Polynomials - Part II J.M. McNamee, V.Y. Pan, 2013-07-19 Whereas Newton's method involves only the first derivative methods discussed in this chapter involve the second or higher The classical methods of this type such as Halley's Euler's Hansen and Patrick's Ostrowski's Cauchy's and Chebyshev's are all third order with three evaluations so are slightly more efficient than Newton's method Convergence of some of these methods is discussed as well as composite variations some of which have fairly high efficiency We describe special methods for multiple roots simultaneous or interval methods and acceleration techniques We treat Laguerre's method which is known to be globally convergent for all real roots The Cluster Adapted Method is useful for multiple or near multiple roots Several composite methods are discussed as well as methods using determinants or various types of interpolation and Schroeder's method

A Monte Carlo Primer Stephen A. Dupree, Stanley K. Fraley, 2012-09-07 The mathematical technique of Monte Carlo as applied to the transport of sub atomic particles has been described in numerous reports and books since its formal development in the 1940s Most of these instructional efforts have been directed either at the mathematical basis of the technique or at its practical application as embodied in the several large formal computer codes available for performing Monte Carlo transport calculations This book attempts to fill what appears to be a gap in this Monte Carlo literature between the mathematics and the software Thus while

the mathematical basis for Monte Carlo transport is covered in some detail emphasis is placed on the application of the technique to the solution of practical radiation transport problems This is done by using the PC as the basic teaching tool This book assumes the reader has a knowledge of integral calculus neutron transport theory and Fortran programming It also assumes the reader has available a PC with a Fortran compiler Any PC of reasonable size should be adequate to reproduce the examples or solve the exercises contained herein The authors believe it is important for the reader to execute these examples and exercises and by doing so to become accomplished at preparing appropriate software for solving radiation transport problems using Monte Carlo The step from the software described in this book to the use of production Monte Carlo codes should be straightforward

Experimental Design and Verification of a Centralized Controller for Irrigation Canals Enrique Bonet Gil, 2018-09-10 The management of a canal starts from setting the demand delivery accurately taking into account the crops necessities during the irrigation cycle and establishing the gate trajectories for controlling the canal in each time step In an ideal case the system would be controlled but someone could introduce a disturbance in the canal which could deviated the real canal state from the desired canal state In that circumstance it would be necessary a feedback controller which could aid the watermaster to restore the desired canal state In order to fulfill this objective we define an overall control diagrams scheme which splits the management of the canal control in different blocks and each of these blocks is represented by a particular algorithm The algorithms developed and tested for us in this book are the CSI and GoRoSoBo algorithms Presents the management of a canal Explains the system of the real and desired canal Defines a global control scheme to master the canal Develops and test the CSI and GoRoSoBo algorithms
